## MULTIPLAYER MURDER

The question on the floor this month is the nature of the multiplayer beast, what motivates him and why it is always more fun pulping a human head than a computer one.

If you take a step back and look at the whole thing with a fresh and critical pair of eyes you'll quickly realise that Multiplayer gaming has given us the perfect opportunity to kill our fellow man and get away with it. All those painful years of shaking fists or swearing in traffic, sighing too loudly in supermarket queues and staring in disbelief at incorrect invoices from plumbing companies have mentally prepared us for this unique opportunity to calm those throbbing veins. We've now found a safe, easy and even fun way to commit virtual murder, taking it out on those pixels has never been more satisfying. The question that must be raised here is why do we enjoy killing humans more than the artificial intelligence of a computer. Everyone says it's because there is no greater challenge than the human animal. The unpredictable playing style and downright dirty tactics used by man is light-years ahead of any programmed AI routines. This is a perfectly valid point and I would say makes up for about fifty percent of the reason, the other fifty percent is pure malicious intent and the spotlight of fame and glory. How often have you gloated and bragged to anyone who will hear about your last game, how you took out the opposition and made them pay for their sins? All that posturing and gleeful rubbing of hands will go unnoticed by your computer who doesn't really care if you win or lose. The reaction you get and looks of hatred on your friends faces is more than enough payment for playing a good game and it is this emotive reaction we crave that makes multiplayer gaming the best thing out there. In light of this there are some lovely single player games around that rely more on experience than pure killing which is why adventure games tend to live on fondly in memory long after the bright explosions and meaty thuds that pure action games deliver. However, here you are actually playing against a human, the human who designed those puzzles and created the world you play in, so beating an adventure is the same as beating the designer who put it together, very satisfying. I believe if you have no one to brag to or anyone's face to laugh in then the multiplayer game would be about half as popular as it is today. Admin it, there's nothing better than joining a Quake game on the Internet and having everyone there fear, and respect or resent your skills.

## FOR THE SECOND TIME

The price increase seems to still be ruffling a few select feathers out there and the main bone of contention seems to be the fact that we haven't 'given you anything extra' to justify the increase. Now I will attempt to make sense by drawing a parallel between the increasing cost of living and the negligible benefits you get from say a petrol price increase for example, so the price of eggs goes up, and do people ask well why should I pay more for the egg? They'll argue that no one has improved on its design or made it taste any better... The problem is prices go up and eggs will still taste and look the same - unfortunately you won't see any direct benefit right now but down the line you will.

**Michael James, Editor**

Well after much anticipation, we have a new addition to the NAG family. The Ed-in-Chief's baby girl finally arrived and at the worst possible time - during make-up week. While we're putting this issue to bed we had to try and ignore those strange smells emanating from Warren's office, turn a deaf ear to the screaming and above all try to get the new daddy to do some work for a change. We all chipped in and bought a few presents. We thought a Pentium chip shaped teething ring and an adorable furry mouse cover should keep the little one happy until she's ready to start writing reviews. Just remember to keep the child away from the keyboard - drool and electricity don't mix well under any circumstances.

We've got a really big Christmas issue planned for you guys and gals - remember to keep your fingers crossed and you might just get a second CD in your NAG bag, all no extra cost. The December issue will be bigger and like this month, crammed to the rafters with reviews, previews and other gaming news. Just the way you like it. Make sure you're somewhere close to a CNA around the 12th of December because the December NAG is going to fly even though we've increased our print run again.

**L**H WITH THE NEW... As you may have noticed, we've decided that the old Web page has become a little long in the tooth, so we're trying some new ideas. After all, a page like this deals with a very fickle environment that changes constantly, so we have to keep up the pace!

**THE RETURN OF EIDOS**  
It was with great joy that we learned that software giants Eidos are making a very welcome return to our shores. Of course, we are all familiar with their stunning titles - just ask the Ed about Tomb Raider and watch his eyes glaze over! Eidos has one of the best distributor sites on the web, which makes a perfect springboard for finding out more about their titles. Surfing in to [www.eidos.com](http://www.eidos.com) will provide you with information on tons of current and upcoming games. In fact, it seems as though the Eidos site is little more than a backbone for several apparently independent sites dealing with their software titles. If it wasn't for the ever present Eidos frame at the top of all the pages, one would swear that the site was little more than a links page! What it is, in fact, is a huge resource for the perusal of Eidos' product range, checking out their corporate information, or making use of online help, to mention but a few options.

One of the titles that can be visited from the Eidos site is Omikron: The Nomad Soul. This dark future game seems to be exactly what the psychiatrist ordered, and full information concerning it can be found here. Of course, we are all, the Ed in particular, waiting for the latest installment of Tomb Raider, entitled the Last Revelation. I have not yet shown this site to the Ed, as we need him to work and not sit and gawk at Lara Croft all day.

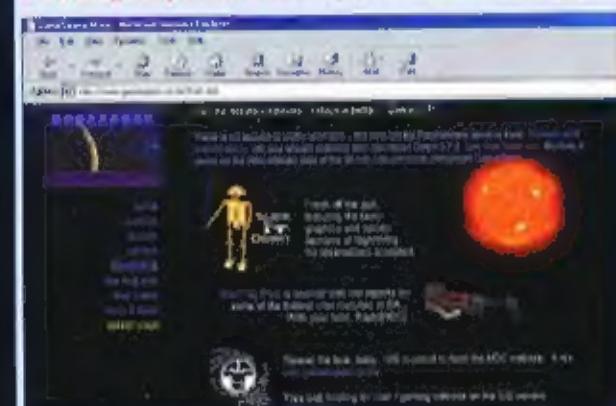

Another major distributor with a site worth looking at is Capcom, who are getting ready to release two major titles for the PlayStation. Both titles are set to take the market by storm. They are the two long awaited horror classics-in-the-making, Dino Crisis and Resident Evil 3: Nemesis. Of course, Capcom covers most available game platforms, so you may find yourself blundering through several titles that won't be available to you, but, then again, that's what back buttons are for. Unfortunately, the sites for these

## RESIDENT EVIL 3 NEMESIS

two games, which can be linked to from the Capcom main page at [www.capcom.com](http://www.capcom.com), are sort of sparse, giving only the barest of information about the games. However, just the right amount of information is included in these single bush screen sheets, and they will most certainly serve the surfer well.

It is always really cool to find a web site that looks great, runs well, works, and is produced locally. For just such a site, take a turn through [www.gamespace.co.za](http://www.gamespace.co.za). This is one great looking site! Game Space is largely dedicated to LAN gaming - particularly clan competitions, and you will find huge amounts of information concerning local clans within its other pages. As at matter of fact, a link to NDC's home page can be found via [www.ndc.gamespace.co.za](http://www.ndc.gamespace.co.za). And any clan who wants a site up on

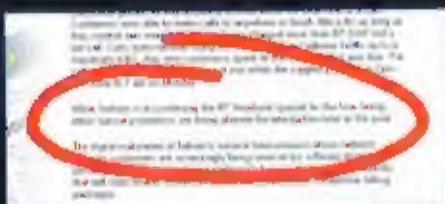

the net can find free hosting through the thoughtful chaps behind the whole Game Space phenomenon. Most of the links and options available on the Game Space site are related to clan gaming, including battle report backs, training tips, servers and the like. Chat areas and notice boards are also provided, to get a handle on what the gamers out there, have to say.

Game Space is largely devoted to Quake, of course, with that being probably the most popular multiplayer series ever. This site features extensive information on Quake 2, and downloads of the new Quake 3 test. However, just to show that they are not biased, a download of the new Unreal Tournament is also available from the site, as well as a link to download the absolutely essential DirectX 7.0. Another link directly from Game Space is to 'Suck It Down', which is apparently another site hosted free of charge by those saintly dudes at Game Space. This one deals mainly with games and, while it is rather opinionated, it is a worthwhile place to visit. The whole site is very impressive. It is a good solid place to surf through, full of excellent information - particularly where local, clan based gaming is concerned.

Of course, Capcom deals only with console games. Therefore, unless you own a PC and not a PlayStation, this information is pretty useless to you, isn't it? One can only hope that, with the advent of the new console systems coming onto the market, complete with their built in modems, we will be able to have an Internet infrastructure that supports browsing via game consoles. But that's something only time will tell.

### THE PRICE OF WAITING

Speaking of Internet infrastructure, I am sure that those of you with e-mail will have, at one time or another received one of those little petitions about Telkom's 'Seven Rand Weekend' that proved so popular with net junkies. It seems that a great many people want this service back, and

they want it back now. So, being a sporting kind of chap, I decided to visit the Telkom web site, at [www.telkom.co.za](http://www.telkom.co.za), to get their side of the story. Needless to say, they didn't say anything about restarting the 'Seven Rand Weekend' on the site.

Rather, an offhand comment about 'future promotions' was made in a small article hidden away in their site's news desk section. Now, you have to ask yourself: wouldn't more people waste their time visiting the Telkom web site if the 'Seven Rand Weekend' was still in operation? I mean, honestly, who wants to visit such a boring site while wasting their hard-earned cash on overpriced telephone services?

### 30 YEARS OLD

Okay, back to games. This year just so happens to be Pac-Man's 20th anniversary, and in celebration, Namco, the original creators of this arcade classic, have decided to release Pac-Man World, a fully 3D adventure game featuring that strange little ball who insists on eating other balls (you have to admit, it's a mind boggling concept). This game has a huge site dedicated to it, which can be found linking from [www.namco.com](http://www.namco.com). Be warned, however, that you had better have Macromedia Flash installed, or your visit will be short lived. Of course, a link to a Flash download site is thoughtfully provided, so you have no excuses. Full information on this exciting new title, including information on all the worlds that Pac-Man visits during his travels, is provided at this site.

Until next month, surfs up!

# Disney's TARZAN

DUAL SHOCK™

# BITS & BYTES 5

## PIRACY BREAKTHROUGH

The last day of September 1999 saw a massive breakthrough in the fight against software piracy in South Africa. In a joint venture between the SAPS, attorney firm John &

## Piracy

Kurnick and ALSPA, pirate software with an estimated street value of R10 million was seized from an office in Booisens, Johannesburg. After an extensive surveillance operation, members of the SAPS Mobile Support Team of Johannesburg International Airport took action against the local distributor of these pirate software files, seizing both PC and PSX titles. In addition to software titles, equipment and parts needed for the "chipping" of Sony PlayStation consoles (a process that allows PSX consoles to make use of pirate software) were also found on the premises.

Spokesmen for the SAPS believe that an international crime syndicate may be involved with the distribution of this software in South Africa. It is believed that the software originated in the Far East, and was brought into the country via Australia. Needless to say, this type of large-scale pirate activity costs the electronic entertainment industry millions in lost revenue each year. Representatives of all organisations involved therefore describe the action taken as a huge success. The investigation continues, and although no arrests have been made, it is believed that the perpetrators will be apprehended shortly. This move marks a renewed effort by all involved, and regular, similar actions will be taken in the future, against both large and small-scale pirate operators. So next time you're thinking of making that illegal purchase be it at a flea market or even at your own school or college, watch out, you never know who might be watching you.

### *Do your part...*

Safact (South African Federation Against Copyright Theft) is in the forefront of the fight against piracy, but need your help to trace and, ultimately, convict pirates and in doing so protect legitimate traders from the blatant theft of intellectual properties and the bootlegging of products. If you have information of multimedia piracy please contact Safact on 011 399-2001 or fax 011 399-3107. All information will be treated in the strictest of confidence and substantial rewards are offered for successful convictions. Now before you all rush off and start claiming your rewards and clogging up phone lines remember to try and have all your facts together, these people need specific details or you'll just be wasting their time.

### *...and we'll do ours*

If you want to come clean, now is the time. Send all your pirate software to our postal address for our big Christmas bonfire, all you need to do is put those illegal products into an envelope and post them to us. Don't worry about anyone tracking you down, everything we get we'll treat with the strictest confidence, after all you are doing the right thing. We've received a few of these illicit packages already so thanks to all those people out there who have already sent us their illegal products.

## EVIL DEAD IS COMING

Some of you might remember that old movie, Evil Dead from Renaissance Pictures starring the wild-eyed zombie basher Bruce Campbell. You don't? Well go look it up at [www.imdb.com](http://www.imdb.com) and then you'll know what we're talking about. In any case THQ (game developers) have acquired the world wide interactive rights to this infamous cult-horror series of movies for the next five years. Heavy Iron Studios will be helping THQ create this new horror experience on the PlayStation and PC. Heavy Iron Studios have been credited in the interactive and movie business with titles such as Parasite Eve and big Hollywood blockbusters including True Lies, Apollo 13 and Titanic. The first game will be called Evil Dead: Ashes 2 Ashes and for now it's going to be a single player 3D adventure. Gamers will control Ash, the humorous hero

from the movies, the game takes place ten years after the last movie as Ash returns to his cabin to battle the forces of evil. The question is, if you know that a bunch of evil monsters are living somewhere, just waiting for you to return, why go back? The game is still far from complete, but as always, is coming soon to scare the life out of you.

## MIGHT AND MAGIC III

The 3DO Company has announced the release of Heroes of Might and Magic: Armageddon's Blade, an expansion pack for Heroes of Might and Magic III. The expansion pack will feature

6 new campaigns, 35 new stand-alone scenario maps and 10 new multiplayer maps. There will also be 2 new hero classes and 12 new creature and dragon types. The add-on also adds seven unique High Level Heroes complete with their own characteristics and abilities. To round off the add-on there will also be an advanced campaign and map editor and a new easy to use random map generator.

## SOLDIER OF FORTUNE

Raven Software have a new game on the drawing boards called Soldier of Fortune, where you'll play a deadly soldier of fortune who's only important mission parameter is to survive. In the game you'll have to take down terrorist organisations, sabotage installations, perform stealthy assassinations or just run in guns blazing. This world of mercenary combat is based on the popular magazine Soldier of

Fate and is promising to deliver the most realistic, cover-operative first person shooter ever, spanning all five continents with a host of unique multiplayer options. The game will feature covert mercenary missions where you play a deadly soldier for hire who journeys across the globe in over 30 missions ranging from a speeding freight train based mission in Africa to Iraqi oil refineries and Russian chemical plants. To aid you in your mission you'll have access to a vicious range of offensive and defensive weaponry including a sniper rifle, white phosphorous grenades and you'll even get to try out a prototype microwave pulse gun. The game is based in reality so if you shoot someone in the leg he'll hit the ground clutching his wound, on the other hand shoot someone in the head and he'll drop dead. There will also be a host of multiplayer options including Assassin where you'll have to track down a predetermined player while someone else hunts you. The game will use an optimised Quake II engine with some of the most advanced 3D graphics to date.

## SILVER BULLET

After a number of rumours and speculation on major game sites across the Internet and a few newsgroups, ASC Software has announced that their scary first person game Werewolf: The Apocalypse - Head of Gaia is still under development but has slipped a few notches down the release schedule. Just to prove that everything is still well in the land of full moons and hairy backs ASC has updated their web site with new screenshots and character art. Apparently the werewolf is still alive and well and you can claw your way closer to this title under development at this address:

[www.ascsoftware.com](http://www.ascsoftware.com). They've got some really nasty looking images in there and the game looks like it's shaping up to be the thriller of the year.

## MORE STEEL MONSTERS

Good news for those people in this country who ordered RollerCoaster Tycoon from overseas, there's an add-on pack coming, called 'Coruscate Follies Expansion Pack' in the US and 'Added Attractions' in Europe. This game scored a massive 90% in our June edition this year and now promises to get even better. The original game gave players a plot of land on which to build the ultimate amusement park, everything had to be managed from employees wages right down to the number of hotdog stands in the park and how much people had to pay for a plate of chips. The best part of the game however was building your own Roller Coasters or steel monsters, depending on which part of the train tracks you grew up on. The add-on pack (priced lower) will include

historical rides like Virginia Reel and Side Friction Roller Coaster as well as a few modern rides. There will also be new scenery, including a jungle and Jurassic theme plus many other small additions that will allow budding amusement park tycoons to customise their creations and make them more varied and interesting. It should be available towards the end of November and an original copy of the first game will be required to play, so get out those credit cards and start spending your money cash!

## SCARY STEPHEN KING

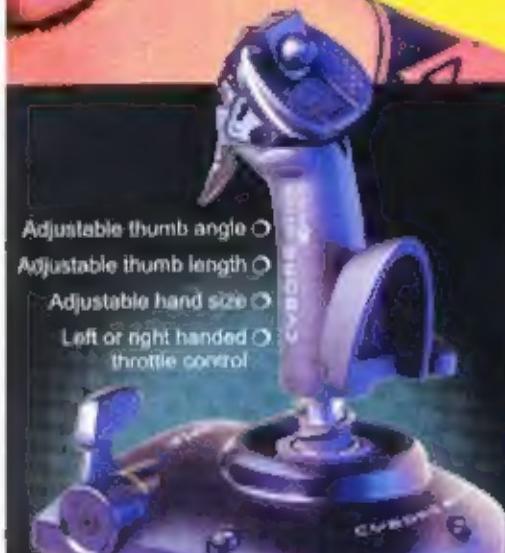

Haven't you ever wondered why there is no F13 key on your keyboard? Well Blue Byte and

horror legend Stephen King are collaborating on a special Christmas project entitled Stephen King's F13. The title will explore the possibility of a user striking such a key with startling and perhaps even gruesome results. The legendary author will be overseeing the entire project that surprisingly won't rely on gory special effects to thrill players. The writer also stated that he always wanted to bring a horror that frightens to computers screens around the world in the same successful way his books and movies have scared fans for years. If you're keen on more information and have the stomach for it, go and have a look at [www.angryhouse.com](http://www.angryhouse.com).

## CONTROL

## CYBORG 2000

The Saitek Cyborg 2000 Stick gives you superb design, excellent ergonomics and complete functionality regardless of whether you are left or right handed. Four unique adjustments allow you to shape the stick to your exact needs putting you in complete control.

- 10 - Metal Gear Solid - MICROSOFT

## In Passing...

### MP3 FOR THE PLAYSTATION

If you have a PlayStation and want to listen to MP3 music tracks then you should soon be able to make use of the new PSX AMP/MP3 card. The card also supports skins, which can be stored to a memory card. Songs can also make use of the memory card and will be able to be shuffled or random played.

### PYTHON POWERS

There's a new game on the way for PSX called Galerians and it's being compared to Resident Evil for its horror content and Final Fantasy VII for its lengthy playtime. The character you play has new special powers which he needs to learn to control and use. The game will urge the player to think before attacking.

### LEEDWIND DALE

New from Black Isle Studios and Interplay is Leedwind Dale. The game is a hardware-accelerated 3D action RPG set in a medieval world like Baldur's Gate. Leedwind Dale will use the Advanced Dungeons and Dragons rule set and feature a number of improvements to the game engine. The game is set in the Spire of the World Mountains just beyond Dale and will primarily be a dragon quest. Check out the web site at [www.interplay.com/leedwind](http://www.interplay.com/leedwind).

### MONKEY MAGIC

Microsoft will soon be making some announcement about their rumoured game console. Apparently Microsoft has been in discussion with a number of US and Japanese game publishers regarding their secret game console. The console will more than likely be powered by a 300 MHz AMD or Intel processor and would use nVidia's recently launched GeForce graphics accelerator. Watch out Sony, Nintendo and Sega.

### VEHICULAR

The latest release date for the much-troubled Daikatana is now pegged for December. The game has been plagued by more problems than is really fair for any development of this type and now stands at almost two years overdue. We're crossing our fingers and hoping it makes it this time or we'll just have to wait again.

### GAME LAUNCHER

Creative Labs has released an early beta version of their new utility called Game Launcher. The software, aimed at the more technically proficient user, will allow players to customize a number of properties for each different game he or she plays. This will allow you to select clock speeds, gamma settings and so on before a game is launched and once completed the utility will set everything back to normal. Go grab an undocumented copy at [www.soundblaster.com/graphic/game-launcher/](http://www.soundblaster.com/graphic/game-launcher/) but please be careful as they are still testing it.

Well that's all the major news this month, well most of it anyway. Until next month, when we'll see if any of this is true - NAB

### DELTA FORCE 2

Delta Force 2 is on its way and lets the player become a member of the U.S. military's elite

anti-terrorist detachment, Delta Force. It's a first person action game but is based closer to reality than Quake: Arena for example, where you play in real world locations and use real world weapons. The game has improved in almost every department with an enhanced graphics engine, new weapons, weather conditions and better control. The weather effects are also important and play a vital role in the game so you'll have to take night vision equipment along at night and consider the reduced visibility in fog. The game supports 3D acceleration but can't accelerate the voxel-based terrain in Delta Force 2, it can accelerate the polygon-based objects in the game, such as people, vehicles and buildings for better performance. One of the more unique features the game boasts is tall grass, useful for concealment and fun in multiplayer games.

### TOMB RAIDER REVEALED

In past Tomb Raider games the training levels have become something of a special bonus where we get to see inside Lara's home, her private race track and even a subterranean treasure room complete with giant aquarium. Now the highly anticipated training level has finally been unveiled - the new training level in Tomb Raider: The Last Revelation will follow a young Lara Croft in Angkor Wat, Cambodia. The training level is a miniature game level where the player will learn more about the sevy adventurer while learning all the available moves in the game and all this while they search for an artefact called the Iris. We'll get to see Lara's mentor Professor Werner Von Croy taking Lara through all the

moves and explaining what needs to be done. The final challenge is a race against Von Croy with a surprise ending.

### DOLPHIN AND S3

The next generation Nintendo console, the Dolphin is going to be using S3's texture decompression algorithm (S3TC). Built right in to the graphics chip, S3's technology will enable Nintendo developers to compress their textures at one-sixth the normal rate. This process allows more data to be stored in textures and dramatically reduces load time, what all this means is that the game player will enjoy highly detailed textures in games, making things just that more realistic.

## PlayStation 3

The second generation PlayStation console hasn't even been taken out of its packaging yet and already unexpected news of the next console from Sony is breaking out everywhere. The report comes from a recent speech made by Sony PlayStation head Ken Kutaragi at the Microprocessor Forum in San Jose, California.

### THAT'S IMPRESSIVE

IBM has achieved a remarkable milestone in hard drive technology with their Ultrastar 72ZX. The new drive runs at 10 000 RPM and can store a massive 73 gigabytes and is part of a family of server hard drives including the 10 000 RPM Ultrastar 36 and the 7200 RPM Ultrastar 36LP which both store 36 gigabytes. The drive series also features a new technology called Active Damping, which protects against temperature and vibration. This obviously isn't intended for off the shelf home computers but will have important implications in the future as the size of hard drives go up and the pricing goes down. Let's hope this doesn't mean we'll see a Windows 2010 eight gigabytes standard installation. Specifications for the 72ZX:

- 10 000 RPM
- 73 GB Storage
- 2.99 ms average Latency
- 5.3 ms average seek time
- 7.04 billion bits per square inch areal density
- 16 MB cache
- 11 Platters with glass substrates

# jUSt CHARTs

With the festive season breathing down our necks, the activity on the charts, both locally and internationally, is heating up. A greater number of new titles enter the charts at this time, and even top titles get shunted down the ranks as the market gets inundated with new products. On the PC chart, Tiberian Sun has taken its expected position at the top this month, with System Shock 2 making a strong entry. Big names like Alien versus Predator and Star Wars Racer appear to be slipping under the onslaught of new titles, while potential winners like Hidden & Dangerous are not rocketing up the charts as expected.

PlayStation titles are also doing a shifty shuffle, with Croc 2 making a powerful entry in first position. Action adventure Syphon Filter and Silent Hill are showing a strong performance, while Driver and long standing Brian Lara Cricket take a dive.

## Local PC Charts

Position	Name	Last Month	Total Months
1.	C&C2: Tiberian Sun	3	1
2.	System Shock 2	New	New
3.	Age of Empires: Gold Edition	2	3
4.	FA Premier League Stars	New	New
5.	Outcast	9	1
6.	Dungeon Keeper 2	6	2
7.	Alien versus Predator	5	2
8.	Silent Hill	7	4
9.	Hidden & Dangerous	10	1
10.	Star Wars Episode I	8	52

## Local PlayStation Charts

Position	Name	Last Month	Total Months
1.	Croc 2	New	New
2.	Syphon Filter	4	1
3.	Silent Hill	6	1
4.	Driver	2	3
5.	Abe's Exodus	5	3
6.	Caalm Super Bikes	New	New
7.	Point Blank 2	New	New
8.	Brian Lara Cricket	1	8
9.	Tekken 3	7	1
10.	C&C2: Reptile Ops	8	6

## Fall of the BINARY BUCCANEERS

Hey, you. Yes, you, the little jerk sitting next to his CD writer, spinning off copy after copy of a game that you borrowed from someone else to distribute to all your snooty little twerp friends. You, the stupid little brainless moron who doesn't realize that every single disk your boot-leg special PC spits out is another disk not sold, and therefore a blow to the PC game industry in South Africa. You, the moron who complains about games being too expensive while you rob the distributors of their living through your actions. You are the type of guys who whine and bitch and moan about the fact that the gaming industry in this country is not all it should be, and yet you offer every Tom, Dick and Harry a copy of the latest game in the same breath. It doesn't say much for our education system!

Consider this a notification, a declaration of intent, if you will. The days of piracy are over. You may have seen (if you are intelligent enough to watch the news and actually find out what happens beyond the bounds of your monitor) that a recent bust took place in Johannesburg. This neat little haul took around 10 million bucks worth of illegal software (for both PC and PSX formats) off of the streets. These disks included titles that have not even been released in this country, and were destined for flea markets around South Africa, where they get sold for next to nothing to gamers who should bloody well know better.

We all bitch about the cost of software. It's expensive, damn right, but how the hell are companies supposed to drop prices if gamers don't come to the party. One particularly bright spark said to me "if, like, the companies drop their prices, then piracy will stop." What a load of horse shit! If the game prices come down, the little maggots who pirate them will have more money to buy blank disks and spread more of their carcinogenic activities around. Face it, because it's the truth. Why should you buy games, even at a cheaper price, when you can get them for next to nothing? There is a strange culture of piracy that has been bred in South Africa, largely due to international sanctions that had been imposed on us during the "old regime" of Apartheid. These were the heady days, when we old gamers had to pirate virtually everything if we wanted to play anything at all. This is something that has been passed on

**Ramjet leaps onto his soapbox once again, and has his say about the state of piracy in the South African Gaming Market, in a way that only he can!**

Any comments, replies (or general slagging) can be sent to [ramjet@compuserve.com](mailto:ramjet@compuserve.com)

started, without a reliable source of games to supply the local market. And then, my friend, then you will hear whining.

The whole problem with your small time pirate (never mind the big boys like the ones that went down in Booyens) is not that he's in it for the money. It's that he's too thick, stubborn or both, to realise that his actions harm the industry. Why the hell should he adhere to the laws and regulations regarding copyright when Daddy bought him a CD writer for his birthday? Why should he act responsibly and reasonably when he can make sub

standard copies of games - who needs a manual anyway? Of course, the industry does fight back. Things like SafeDisk and misreported file sizes do make the lives of pirates a little more difficult than they'd like, but these deterrents are just that. Any resourceful pirate knows 22 ways to bypass copy protection before it even hits the market, so there's not much point, other than to keep the small time operators frustrated for short periods of time. Back to that declaration. We know that you're out there. We know what you're doing. We know that you think there is no way we will ever be able to find you, but you should quit fooling yourself. We will, come hell or high water, prosecute you to the full extent of the law! And for those of you that aren't pirates, remember that we have to put a stop to this

before it gets too far - if it hasn't gone too far already. And don't try ultimatum, because that's not how

this works. It cannot ever be a matter of "if you drop prices, we'll stop pirating" or "if you stop pirating, we'll drop prices." That is just not the way the world works. That is the juvenile kind of approach that will get us nowhere. Everyone involved needs to work together. We need to realise that we need each other. Distributors need gamers, and vice versa, for the industry to be a success. And it is our responsibility, as much as it is the industry's, to stamp out the rot of piracy - as (supposedly) responsible (hopefully) law-abiding (theoretically) adults, it is our duty to do everything we can.

Oh, and by the way, you over there, the little pirate with the smug grin on your face if you think these are hollow words devoid of any bite, you are wrong. These words are not a threat. You know the rest!

RAMJET

## A truly great idea

I read your editorial some time ago (there are people who do) and found at least one idea of some practical use. I'm married and my significant other usually views computer gaming as a senseless waste of time. Your editorial woke me up to the importance of including her in my electronic pastime and, to this end, I recently purchased a copy of Grim Fandango, a truly excellent game, as recommended by your magazine. This has provided me with the proverbial foot in the door and I would like to sincerely thank you for your ideas. Another great idea was fielded in the article, Multiplayer Mayhem, in your October issue. Set up a club! Why didn't someone think of that sooner? We have chess clubs where people regularly gather for an evening of, well, chess. There are Bridge clubs and Scrabble clubs and so many other clubs that I'm amazed that no one has approached their local recreation centre to provide a venue for a once-a-week evening involving multiplayer gaming. I love multiplayer gaming, but always have so many hassles getting a group of people together for a really good session of unmitigated cyber-violence. Wouldn't it be excellent if you could just pop all your gear into the boot of your car and drive to the club for your Thursday night session with the gang? You could probably buy an 8-port hub, 8 UTP cables and a bunch of extension plugs for less than 4 decent chess sets. You could run leagues, tournaments and ladders just the way Storm suggested. Of course there will have to be some sort of membership fee to take care of venue, club equipment, administration and even a club library with the latest in multiplayer titles. RG20 a month sound OK? I'm keen and all of a sudden very excited about the idea. Are there any takers? Thanks for a great magazine and also (for a change) a hilarious cartoon.

**Eddie Tauta**  
E-mail

The list of requirements are obtained from the developer sites or simply straight off the box. We cannot check every possible configuration but each game we review goes onto at least two different machines, a high-end machine and then a low-end machine. Low system requirements often raise the game's overall score slightly because we think it's a good thing if a game can run on almost any machine. There are two problems here, an optimistic requirement put there by the developers whose idea of minimum is barely adequate but will run at push. The other problem is machine maintenance, when last did you update your drivers or defrag your hard drive? Do you

use enough disk space, did you check all the options when installing and are you using the correct driver? Most of the time the problem lies with a stuck machine and not an incorrectly specified game, but it is always a good policy to make sure you have more than is required in any case, just to be safe.

**Lal**  
**A bit of everything**

I have been reading game review magazines for years but they have always been overseas magazines and it is nice to have a magazine concentrating on the local market (conventions, online gaming etc). I have a number of reasons for writing. Number One: I like the fact that there are some old games amongst the staff writers. I started playing games when I bought a ZX 48k Spectrum. So I for one appreciate the references to games like Elite (wire frame graphics and all) and my personal arcade favourite Xevious. Remember a game called Barbarian and the fuss it made (in England anyway) because you could cut off somebody's head?

Number Two: Graphics are everything. I agree with what you say. We need more games that are innovative, have playability and are fun to play. Not games that look good because they are using the latest 3D engine, but play and feel exactly like all the clones that came before it. Although I would rather be playing today's games because of the better graphics, they must above all else have playability and atmosphere (which is usually generated by a combination of story line, sound and graphics etc).

Take Half-Life for example. The graphics are excellent, but I think Unreal and Mortal Kombat look far better with their lighting effects and reflective surfaces. But Half-life was by far a much more enjoyable gaming experience because of the engrossing story line and gameplay which generated an atmosphere that draws you into the game and keeps you coming back for more. In Mortal Kombat all you do is run from one level to the next, killing Nazi bad guys with a minimal plot connecting the levels together. Quake 2 is another good example. Multiplayer is brilliant. The playability of the multiplayer game makes it fun to play, and this is what makes it so good, not the graphics alone. In gaming terms it is an old game but how many people are still playing it multiplayer? Graphics do go a long way in making games more appealing but without the playability and atmosphere (story line etc) that the game generates, all you really have is

ty and atmosphere (which is usually generated by a combination of story line, sound and graphics etc). Take Half-Life for example. The graphics are excellent, but I think Unreal and Mortal Kombat look far better with their lighting effects and reflective surfaces. But Half-life was by far a much more enjoyable gaming experience because of the engrossing story line and gameplay which generated an atmosphere that draws you into the game and keeps you coming back for more. In Mortal Kombat all you do is run from one level to the next, killing Nazi bad guys with a minimal plot connecting the levels together. Quake 2 is another good example.

Multiplayer is brilliant. The playability of the multiplayer game makes it fun to play, and this is what makes it so good, not the graphics alone. In gaming terms it is an old game but how many people are still playing it multiplayer?

Graphics do go a long way in making games more appealing but without the playability and atmosphere (story line etc) that the game generates, all you really have is

pretty pictures to look at. So although I do have one of the latest 3D cards, I would rather play Starcraft or Baldur's Gate, which do not use 3D acceleration but offer plenty of gameplay.

**Emeric**  
E-mail

**Number One:** All of us at the office have been playing games since games were invented, although Atari baby somehow manages to go back even further. So what you're getting in NAG is a very considered opinion on any type of game simply because we've played almost every game out there by now, except those first very violent games. **Number Two:** Since bringing up the whole gameplay versus graphics question I have received many letters from many different people all playing different games and the common consensus seems to be that they would all drop graphics for gameplay in an instant. Thought provoking discussions similar to this one have now become commonplace in the office when rating any new game, the bottom line is this - spectacular graphics will impress initially but after that there needs to be a good game underneath or the score will suffer.

**Lal**

## Bite your tongue

I recently bought myself the game Aliens versus Predator but there's something really wrong with it. I want someone to confirm if it's a pirate copy so I can report my problem. I have, after all, paid the bucks and now I suspect it was for a fake copy. The reason for my thinking is as follows. There is no set-up or installation feature or file on the CD (I had to manually copy all the files to my hard drive). Then I had to go to all the file properties and unmark the read-only box before the game would work properly. There is no read me file on the CD, and I didn't get a manual. There is no introduction. There are no movies. (I made sure that movie option was marked yes in the options menu and I have seen the game before, there should definitely be full motion videos, but I have none). There isn't a DirectX file, folder or installation on the CD. There is no CD music. The whole thing comes on a single CD. The game often bombs me back to the desktop and there is something very wrong with the sound. Now for the big question, there are existing user profiles in the game. Who created those? I would like to know if you think there is something wrong.

**D C Grobbelaar**  
E-mail

You're not seriously asking if this is a pirate copy are you? I believe the first problem you listed should have pointed your thinking in the right direction. I don't even want to ask how much you

# ARCHIVES

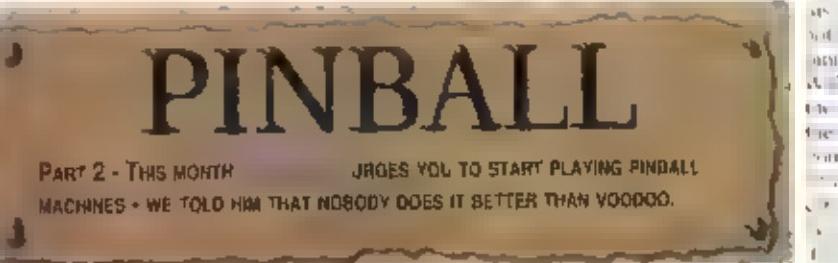

Last month we looked at the history and origin of pinball games and saw how they evolved from being games of chance into actual games of skill. Through the ages, pinball has developed a great cult following with many players and collectors devoting their entire lives and channelling considerable resources into restoring and rebuilding old machines. In today's modern age, we as pure electronic gamers sometimes overlook the pioneering spirit of the developers and designers that created and perfected these pinball games as we know them today.

But what's cool is that pinball is still going strong at nearly 100 years old, and in fact probably is one of the best games ever made.

As you can see in the photo to the left, pinball games have it all: skill, strategy, fun, and even a little bit of art. The all-time classic pinball machine is the *Williams Pinball*, which was invented by Gottlieb.

Successor to the inventors of the Williams Pinball game is the company Ink Rock. Andrew J. Pascual, president and CEO of Ink Rock, says that Williams' game was "a real cult classic."

After 10 years of development, the new Williams Pinball game is set to hit shelves in 2000. It's called *The Wizard*, and it's based on the single-player game *Wizard of Oz*. It's the first Williams Pinball game to feature a story line.

Age-old secret to the game of pinball: the secret to winning and defeating opponents rests in these battle-tested techniques:

Breakthrough

# Ultima

## ASCENSION

The legendary Ultima series has been running longer than many care to remember and is synonymous with Lord British. A lot of users who were not update the Ultima series, like the many Wing.

In the weeks of the Ultima creation Project to embark on an adventure beyond imagination with the return of the best selling role-playing series of all time. In the 9th and final chapter in the 20-year legacy you return to Britannia for your last epic quest. As the heroic Avatar, only you can save Lord British and his people from the evil Guardians who have desecrated the land and violated the eight sacred virtues. Valiant combat, magical prowess and knowledge of the eight virtues are your weapons against evil in Ultima IX: Ascension, the most epic role-playing game ever created for the PC!

It appears Richard Garriott has been well focused on this title and has spent a lot of time ensuring it is perfect. There are some areas of the game that will surprise many fans and first on the list are the graphical details and some of the interesting locations of the world. At present the views and camera modes within the game are yet to be finalised but it does appear that the view will be free roaming with the dominant

Commander fans, should go back and have another look at the game for it has changed a lot and the latest version, due for release, is now looking absolutely fabulous.

Derek de la Fuente

View as a third person over the shoulder. Some clever coding means that the camera will move relative to your hand so if you look left the camera view will start in that direction. This appears to give the game lots of scope and flexibility to viewing the game world, which is very detailed and polished. The locales in the game include Valoria - a lava tomb nestled in a jungle, Trinsic - a half-submerged Arabian city a la Verda, and the Avatar's house on Earth. The use of light, shade and colour, with an impressive palette, bring the game to life and each world has a very different look. The game's story is being kept relatively secret even at this late stage, but it centres on the restoration of Britannia. The eight cities representing the eight virtues have been warped by mysterious pillars, which have appeared near cities and are exuding evil vibrations. These evil vibes have

twisted each city's virtues. British, once the model of compassion, has turned into the mat of hatefulness. Your goal is to restore the eight virtues in these cities. There will be around five less-important quests and roughly 20 major quests to round out the game's journey.

The interface, the bane of any good game has changed quite a bit over the game's long and varied development cycle. At present they are putting the final touches on so that the player will be able to customise the interface so that it will support

function keys will be used as your hotkeys for items, weapons, or spells. One overriding factor was that the game had to please all the avid Ultima fans whilst also being able to entice new users and those not familiar with the Ultima world, look and traits. It appears it is a hard job creating a new and innovative feel to entice the new users whilst keeping

## ULTIMA ASCENSION (CONTINUED)

The Avatar, while seemingly the prototypical hero, is a being whose age and limitations do not adhere to those of the typical human. His suspended or accelerated ageing, his ability to slip from earth to explore other worlds, and his role as hero and saviour of Britannia make him a creature not altogether human but perhaps super-human. The Avatar originates from earth and discovered the world of Britannia as a teenager, a very young man. He was referred to as 'the stranger' in Britannia, he was

enthralled with the opportunity to fight evil to kill all adversaries. He simply enjoyed fighting and didn't trouble himself with the ethics of good and evil. He simply believed that he fought for good and believed in a simplistic scheme of either moral opinions. As a result of his valour and strength, he was eventually dubbed

Avatar and this special honour conferred upon him gave him a sacred responsibility to uphold the best interests of Britannia. He is benevolent ruler Lord British, and to fight evil. As the Avatar returns to Britannia for the ninth time, he finds it in a state of almost emergency but this time he approaches his task not as a boy but as a mature man aware of the more subtle issues facing him and Britannia. Not only the Avatar feels a sense of sorrow and frustration that in spite of the fact that he repeatedly returns to this land to slay literal and figurative dragons, the people of Britannia and especially Lord British are still neoprene and helpless in the face of threats. Therefore, the Avatar wishes to teach the people of Britannia to sustain a system for maintaining good one in which they can prosper and stuck weed out destructive forces.

But he repeatedly returns to this land to slay literal and figurative dragons, the people of Britannia and especially Lord British are still neoprene and helpless in the face of threats. Therefore, the Avatar wishes to teach the people of Britannia to sustain a system for maintaining good one in which they can prosper and stuck weed out destructive forces.

that the music will be varied and includes soft and melodic tracks for the city of Moonlight, while the other was a Middle Eastern-inspired theme for the Arabian-styled city Trinsic. Songs are also being composed and played whilst in battle against shadows.

The 3D engine, a focus point of the game, is another area where no information is being let out but just looking at the scenes will give some idea as to the sophistication on offer. The game will offer a stronger and deeper story line with less puzzles and more interaction, but still staying to the true roots of the Ultima series. The essence as always will be on the story line and character virtues which are still the main focus of the game, so you will still be able to relive the epic saga through seamlessly integrated combat, adventure, and puzzle-solving and be immersed into the world of

Ultima. In Ascension where you will notice change is the music and sound effects. Comisioned professionals in Los Angeles have been given the task to come up with scores of music for the game and each city has a theme, as does each major character and boss. Music will also be dynamic and change to reflect events. Via a US source I was able to find out

that the music will be varied and includes soft and melodic tracks for the city of Moonlight, while the other was a Middle Eastern-inspired theme for the Arabian-styled city Trinsic. Songs are also being composed and played whilst in battle against shadows.

That's all I know about Ultima IX: Ascension.

Ultima first hit our monitors in the early 80's and has gone on to become one of

the biggest selling RPG's in its kind. Richard Garriott has always been the front man and inspiration to the game bringing in new personnel on a regular basis. The ninth title in the Ultima series, the last version being the online version which you can only have if you pay for it and buy the full title or pay for local calls. Ultima Ascension offers International its very best and real world involvement that many are saying is unsurpassed.

The basic game idea is that you must lead the Avatar down the paths that follow eight virtues and vanquish the avatars of a bad guy. There are eight major cities based on the eight Virtues, which include Valkuria, a place of fighters and with plenty of valor. You will travel in the winds Almud where the human work hard at city, hunting the virtuous savages Scarabaei who anger and philosophers live. Magimia, a town full of proud people. Bruan

Bethania like never before. The further you progress in the game the more moves you will be able to make and be kept tabs on the interface and the many menu bars that will aid you in your progress. To those that worry about complex story lines, fear not for a long narrative will explain to the user what is required in the smallest of details.

Although the plot starts off from the last title you do not have to have played it to enjoy this experience. An RPG with strong adventure roots.

**Team question:**  
"The story endings will be stunning, you should have a sense that the major characters have come to fruition or actualized, the plot arc should be resolved and the questions answered. Currently the world has over 175 NPC's who all have unique conversations. We are still adding more people."

It is a 3D game with a lot of character movement, all with the speed and fluidity of Quake with some of the best 3D graphics seen to date.

Graphics are the best quality in Ultima ever created. With day and night effects, realistic physics and 3D textures, the game is going to be a masterpiece.

Gameplay is full of action, puzzles and interaction. Simple and straight forward, yet challenging.

Ultima Ascension will support single player, co-op, and online play. It also supports multiple platforms and multiple servers. It will be available on PC, Mac, and Linux.

It is planned to be released after Christmas and early January.

To the world, and may have as many as 200-300. This does include guards, although unlike older Ultimas, most of the guards are not generic, all saying the same thing. The cities will be full of people, some with more than others."

A majority of narrative cinematic has been developed as pre-rendered flick. There are some moments within gameplay where control is taken from the player and a linear sequence of events plays out (therefore both techniques are used). Several points led us in the direction of using pre-rendered flick.

While the UUA game engine is incredibly versatile, coding sufficient tools to choreograph a complex narrative scene was low in priority for our programming team. These tools are readily available in off-the-shelf animation software like Lightwave and 3DSMax.

While our in-game characters are beautiful to look at, they don't convey the extremely subtle non-verbal subtext that we wanted in our flick - a sense of suspicion, a start of surprise, etc.

While the world is rendered beautifully and the artwork beyond par, off-the-shelf software provides us with a broad range of control for lighting and special effects.

Regarding the weather conditions - Ultima Ascension does support rain and fog to varying degrees. The wind also changes with weather. Sunny days have a light breeze, stormy weather has a

heavy hand of the gods who are full of compassion. Morning, sun and magic and

the truth reign and finally Ultima, a place of honour, the powerful being known as the Guardians from Ultima 7 & 8 established himself in Britannia while you, the Avatar were trapped on a world allied Pagan, the setting of Ultima 8. There are 8 main columns throughout the land of Britannia, presumably created by the Guardians, which are causing destruction and manipulating the citizens towards a non-violent mindset. Your job of course will be to set things right.

Ultima Ascension will be the last Ultima to feature the Avatar and will tie up a lot of loose ends from the entire Ultima series of games. If you're a veteran of the series you'll recognise a lot of familiar characters, places, and items from previous games. The game will come on multiple CDs with a long and detailed, impressive loader.

heavy wind that kicks up. The sky will smoothly transition from day-light to storm conditions. There is lightning, both in terms of a sky image and in terms of the light source flashing the world. Currently the sky smoothly transitions from day to sunset to night and back again in the morning. And, because the weather is geographically located, when you pass through a biome you'll get different weather at the other end. No seasons though.

The physics in the game doesn't include buoyancy, but we don't utilize that for swimming. We do feel it would be tedious to have to disrobe to swim. This may change, but currently your armor has zero effect on your ability to swim.

Ultima Ascension is a real time combat game, and there are no plans to add turn-based combat. Arrows do "stick" in your opponent, but they fade out over time after their damage is done, making it impossible to re-use them. Otherwise,

during bow combat, an opponent with a lot of hit points would begin to resemble a porcupine.

Magic: There will be 8 circles of magic (with spells of increasing power in each circle) plus one circle of lesser magic (very simple spells that don't cost any reagents or mana to cast). Each circle will have one spell for each of the 5 elements introduced in Ultima 8: earth, air, fire, water and ether. The spells will cost you something, however, like mana, and "on the fly" spells will be restricted by something of that nature. Ritual magic will require the player to perform a specific sequence of activities in order to cast the spell. You will also be able to create potions with magical effects.

**Computer Artworks**, headed by some say creative ideas/artist genius William Latham, has previously worked on titles such as Organic Ari, a surreal screen saver. Now the team is moving on to their first real 'game' but drawing inspiration from their previous work. I met up with producer Vince Farquarson and William Latham himself to get a fuller insight into what they are creating.

Evolva, what is the scenario behind the name?

The following is a copy of the letter which the  
agent, during his general tour of the  
country, addressed to Mr. Wm. H. Seward,  
then Secretary of State, in which he says  
that, according to his knowledge, there are  
no negroes in the country, except those  
which are to be found in the cities, and that  
when he goes to the different plantations all  
negroes are to be found in the cities.  
He further says that he has no knowledge  
that any negro ever goes from the cities to the  
country, or vice versa, or that any negroes of the  
country become negroes in the cities.  
The General Agent is  
particularly

A screenshot from the game Genghis: The Last Days. The character, a large, muscular alien with a textured skin surface, stands in a dark, rocky, and desolate landscape. A bright red, glowing energy field surrounds their feet, suggesting a power-up or ability activation. In the foreground, there is a horizontal row of four small, rectangular icons, each depicting a different alien species with unique features like multiple heads or tentacles. The overall atmosphere is dark and mysterious.

This is your best major game. Have there ever been any major problems?

the following day. The author has been unable to find any record of the name of the author or publisher of this book.

**How was the game created?**

The original idea was Mark Atkinson who came up with the concept and made a prototype of the engine using his idea of the mutation staff. Then I came on board and took that original concept and changed it a bit. It was a bit more of a strategy game at first but it has been a combination of puzzle and strategy. Everything was sketched out on paper. We then imported them in and used them as templates to create the models. The way we work is like we would do a design brief and what we would do, this creature appears here, does this etc. and that's given to a 3D artist who would do an art brief. Then we have regular meetings usually with Carl and myself and it's quite a firm batongue. The central input from William has been the mutation stuff, like and Mark

formed the company to make interesting software now. Williams' involvement is as chief director of the company. He's always looking at what we're producing.

What is the strategy part of the game?  
In our original concept that was dropped because we came up with a better mechanism. The way we picture it is in a detachable shield. It's a gun and if you fire individually or all together there is like the whole RPG thing, we've got a speedy guy, a guy sniper, repeater guy, they all start with different abilities. So another element is that you might want to use the speedy guy to distract the

**HAD** You only have four soldiers, what happens when they are killed?

As you go through the levels you are powering up. If you die, you get blown into body bits, and those body bits can am genes, so your other guys can soak them up. When you come to the last level that guy gets up, started the game again—that is who he hasn't got all those genes that he powered up so you might want to replay

It is also important to give children different ways to play with collapsed paper because it stimulates their imagination and creativity. Encourage them to play with it like clay or sand, or even to draw on it with chalk or paint. This can help them express their thoughts and feelings through art.

The image is a composite of three distinct visual elements. The central element is a full-body illustration of a woman from the waist up. She has short, dark hair styled in a bun. She is wearing a black, off-the-shoulder top with a wide belt and black shorts. Her right arm is bent at the elbow, with her hand resting near her chest. Her left arm is also bent, with her hand near her shoulder. The background behind her is a soft, glowing light. To the right of this central figure is a smaller, rectangular inset image showing a person's silhouette standing in a doorway. To the left is another smaller inset image showing a person sitting in a dark room, possibly a car interior, with their head down.

and many small shrubs  
and ground-cover and  
watercress here and there.

that daily I write to you  
new names for the stars,  
these awful, dim star shapes  
are my alphabet,  
and the pale, thin  
script shapes all written  
new, only in stone, still  
I try to stop them from being  
written over, it is so difficult  
to see the stars, to see  
them as they are.

Some other words from the  
poem follow. In the first two  
lines and some others, the  
rhyme scheme is ABAB  
but in the last two lines  
it is ABBA.  
The meaning of  
most words is fairly  
obvious. But  
some words  
are difficult  
to interpret.  
A number of  
the words  
are derived  
from Latin  
and Greek  
and mean  
something  
more than  
they do in  
English.  
The meaning  
of some  
words is  
not clear  
because  
they are  
used in  
a special  
way or  
in a  
special  
sense.  
With  
these words  
in mind  
try to  
read the  
poem again  
and see  
if you  
can  
understand  
it better.

Any game coming in this rated and isn't going to gain him status. Avoid completely, unless it does the same as these games just keep doing worse, although titles coming in the middle might be good for a laugh - just try for doing something lighter at all.

Very nice game! I think this game is worth the price, it's also available from them from shipping it to the new market, sometimes you have to look if they sell in terms what they say or

Mind-blowing game! So difficult to use, but it's great and fun! I mean, I mean the game is really good, but it's not that fun, but it's well designed and flawless, straightforward

Cool game, quite nicely done about this work. Combination of serious flaws in kick features, it's in these games not having another unit in the game, it's just the game will usually lose those titles.

Like nothing here, there is usually no game like for you buying a game that is in this single-player spans from a free form attack, of course, technically flawless but just not very inspiring.

Not quite reaching this status, doesn't stop it from being good, it's very well balanced, but little bit of a letdown from classic status. No game ever presented some more very close and hot, is where you'll find them.

The ultimate action intent for a game is to get over the rough top, it presents an automatic goal here, if you enjoy the type of game at after also a good place to ship it's one of the kind of game, and would like to broaden your horizons.

## THE MARCH OF TECHNOLOGY

The time for games in this country grows short. Not in the Armageddon, end-of-the-world kind of way, but in a slow, cancerous style, as our machines become older and older, and less capable of running the new products that are hitting the market. Our recent survey indicated that a large percentage of games out there are still running standard Pentiums, mostly P166 and P200's. This means that, when the flood of Christmas titles for 1999 hit our shores, vast numbers of people out there won't be able to play them. What is to be done about this situation? Well, we can whine and moan,

and stamp our little feet until the cows come home, but let's face facts. South Africa is hardly a big market demand in the international view of entertainment software. Developers hardly think "well, let's try to keep this game's specs down for the poor little South Africans." Games are developed for overseas markets, primarily, and it's a hell of a lot cheaper to upgrade over there than it is here. All we can do is grin and bear it. Look on the positive side. You want to play games the way they should be played? Then you better learn the self discipline that it takes to set up for the machine! Oh, it's very easy for us to say; what with these fancy machines that we use at NAG, but, believe me, if there were no games out there, there would be no NAG!

# TOMB RAIDER THE LAST REVELATION

## Features

New inventory system allowing users to combine items to make tools, map her progress and get hints and tips during her adventuring.

Interactive environments - Lara can shoot arrows, read inscriptions, blow up walls, kick down doors, etc.

More new moves than ever before - including climb and swing from ropes!

New weapons and items include crossbow, jagged bullets, binoculars and flash-light!

Highly evolved AI - intelligent enemies, sentries and dodge Lara's moves!

## CORE

outfitting the ships to be vulnerable to fire. In addition, the ships can be set on fire by the player's own forces.

Age of Kings is a solid addition to the Age of Empires II series. It adds a new dimension to the game and it is well worth the price of admission.

**Age of Kings** is a solid addition to the Age of Empires II series. It adds a new dimension to the game and it is well worth the price of admission.

The game is a great addition to all the previous additions to the game. The new features are well worth the price of admission.

The new features are well worth the price of admission. The game is a great addition to the Age of Empires II series.

For all time, Dragons have fuelled mankind's imagination with images of fiery breath and ancient intelligence, soaring through the skies with wondrous, hidden treasures. In fact, Dragons can be found in almost every major folklore and mythology around the globe. They have been the staple of fantasy fiction, both in printed and film media for as long as the genre has existed, as both heroes and villains. And now, they enter into the realm of computer games as one of the two heroes in the wonderful epic *Dragon's Edge*.

# DRAKAN ORDER OF THE FLAME

**W**hen we saw our first baby  
we were very excited to see  
how small it was. We had no idea  
that it would grow so quickly.  
We were also very happy to see  
that our baby was healthy and strong.  
We are looking forward to many more  
years of joy and happiness with our baby.

and the other half the time  
of the day we are not  
so much trying to work  
as to be the best we can  
possibly be. I am not  
so good at it as I would  
like to be, but I am getting  
there.

A photograph of a person sitting on a large, abstract painting. The painting features a figure with a large head and a textured, multi-colored body (orange, yellow, green, blue). The person sitting on it is wearing a dark jacket and light-colored pants. The background is a plain, light-colored wall.

A collage of three images. At the top is a large, stylized 'HAPPY BIRTHDAY' banner with a rainbow gradient. In the center is a diamond-shaped badge with a black border containing the word 'GAMING' in white. At the bottom is a 'NEW AGE GAMING' poster featuring a woman's face and the words 'ACHIEVEMENT OF THE YEAR'.

DRAKAN: ORDER OF THE FLAME CONTINUED

and the public domain. The  
one who has a general  
and educated knowledge of  
the subject can then make  
a better judgment as to  
what is best for him to do.

A screenshot from the game shows a character in a dark, atmospheric setting, possibly a dungeon or密室. The character is wearing a hooded cloak and appears to be in a crouched position, ready for action.

# REVIEWS UNDER FIRE

In its own unique way the first game showed us that we could relive our childhood plastic soldier battles minus the mud and the begging of parents for replacement soldiers after the aerosol can flame-thrower siege. Playing with plastic toy soldiers could occupy many an afternoon as a child, now you can do it all over again without looking like a fool or getting your clothes dirty.

Red Tide

**N**ot much has changed since the original Army Men. It's still the same

game, but it's been refined. The graphics are better, the levels are more varied, and the controls are smoother. The game is still a lot of fun, but it's not as challenging as it used to be.

The game is set in a post-apocalyptic world where the last survivors are fighting for survival against hordes of mutated alien creatures. You play as a single soldier who must defend his base from attacks by these creatures. The game features a variety of weapons and vehicles, including tanks, helicopters, and planes. The graphics are impressive, with detailed models of the characters and their surroundings.

**Graphics:** The graphics are excellent, with detailed models of the characters and their surroundings.

**Sound:** The sound effects are good, but the music is a bit repetitive.

**Gameplay:** The game is fun, but it's not very challenging.

**Conclusion:** Army Men II is a solid follow-up to the original game, but it's not as challenging as it used to be.

## ARMY MEN II

Army Men II is a solid follow-up to the original game, but it's not as challenging as it used to be. The graphics are excellent, with detailed models of the characters and their surroundings. The sound effects are good, but the music is a bit repetitive. The game is fun, but it's not very challenging.

# REVIEWS UNDER FIRE

Ever since having the privilege of first seeing this title at E3 in Los Angeles I have had the urge to make my mark on it; only to find out that no Distributor in South Africa was planning on bringing it in. This sent me on a quest to Hasbro/Microprose to get my leather-clad paws on a copy of GP500 which would hopefully end my frustration at our market's inability to bring in all the top titles into our forgotten country. Now as I stand on the threshold of history, I embark on a journey into power, speed, glory and glory as I attempt to stand aloft the ultimate podium, the FIM Road Racing World Championship.

My first encounters with GP500 in Los Angeles left me with a bright disposition towards the title from the onset, but as

As with all racing sims the control factor is critical to the success of any title and Microprose's track record like no other in the simulation field has once again shown their true grit and determination to stay aloft the simulation market.

Acquiring the talents of Kenny Roberts JNR to help with the development has paid off in leaps and bounds by adding first hand experience to the control of the game. With support for all the major peripherals it was surprisingly easier to control the bike on the keyboard than all my fancy gaming peripherals I have stashed away in my office. Why? I cannot quite fathom the answer to that except that Microprose have created such a wonderful touch and feel about the control mechanism

Fuelling my desire was yet another stroke of fortune as I was given tickets to the South African Grand Prix in Welkom, which peaked my interest even more, leaving me anxious the entire day to get home. After returning I typed open the shrink-wrap like a puppy with a fresh bone and installed what is one of the leading sims available on PC.

Initial impressions are certainly a good start for any product but more so when your interests lie in the specific area in question. After receiving front seat exposure to the real deal in Welkom it was interesting to note how closely Microprose had modelled the game on the Championship. The front cover of the box sports a close up of Kenny Roberts JNR who was instrumental in getting the technical elements of GP500 as close to the real experience as is technologically possible.

The Shell Advanced Racing Team and Suzuki Specialists also added the finer touches to GP500 and this shines through in the gameplay and control attributes of the title.

GP500 has few competitors in the market and one rival in EA's Superbikes, but being the newer and fresher of the two has its advantages. The GP500 team has capitalised on the extra development time and has almost surgically produced one of the most realistic racing simulations yet seen on a PC. With the seemingly simple option

between arcade and simulation you can decide on the level of realism and the fine options can be manipulated to suit your racing requirements from the game.

Strangely enough the gap between the difficulties of arcade and simulation is not as

GROWING  
GAMING  
ACHIEVEMENT OF  
EXCELLENCE

91%

as a podium finish at the highest AI level. The differences between the two are simple yet effective, the simulation mode tests your control and braking technique to the max sometimes leaving you exhausted from the concentration needed to

overcome the pressures of close knit racing. In arcade mode the control factor is less explicit but the braking is still key success or failure.

Graphically GP500 must receive a thorough round of applause for an almost flawless representation of the sport with 3 differing camera views, as well as wonderful models, animations and excellent location graphics. For all the followers of the FIM

Championship you will recognise many location landmarks such as the Ferris Wheel at Suzuka in Japan, unfortunately there is no South Africa representative as all the stats and figures are taken from the 1998 season, which include the 14 tracks of that season only. The rider and bike models are superb and rate on the same par to its EA counterpart if not better but it lacks the same crash model as

Superbikes, which in some way is disappointing as the rider is flung off the bike but reacts with stick-like precision in a totally unrealistic fashion. This is one slip

up in a seemingly endless array of eye candy features that include tyre marks, dust clouds, smoke and sparks from the bike scrapping against the tar of the road, to name a few. All these elements combine to catapult GP500's looks and appeal to the top of its genre. The sound effects have been taken from actual bike recordings and though a little irritating at first it becomes clear that this is how it is when you're in the hot seat. Microprose have included EAX and A3D support for those lucky enough to support the API's, delving deeper into the depths of player immersion into this racing sim.

that I feel comfortable using my most used device, the keyboard. The bike does not jerk quickly to quick movements but rather banks evenly and majestically into corners. This alleviates any tendencies to suddenly correct an indecision, which will result in testing your leather's durability to far. This does however leave you in the dirt if you happen to brake a little too late or take the wrong line into a corner but that is part and parcel of concentrating on perfection. The control mechanism and physics engine in GP500 is superb in all aspects and by adding finishing touches such as sliding the bike into corners and powering out, then leaning the backend slightly only to bring it back in line, does nothing more than leave me wondering if I am actually watching a televised coverage of an actual Grand Prix with a gamepad in my hand. Other features include linking with your bike settings for getting every last ounce of performance out of these powerful machines (adjustments can be made to tyres, engine, gears, suspension) and can get quite technical if you enjoy the finer details of tuning your bike.

The game is one of those titles that will keep your interest for more than a few months because of its advanced AI system

## GP 500

**Honda NSR 500**  
Year: 1997  
Engine: Two-stroke V4 water-cooled, 499.27cc  
Power: Over 180bhp  
Bike Size: 54mm x 54.5mm  
Weight: 131kg

The NSR500 V4 is designed for high power output and has been a consistent winner for over 12 years with relatively minor changes in design.

**Honda NSR 500**  
Year: 1997  
Engine: Two-stroke V2 water-cooled, 499.27cc  
Power: 130bhp  
Bike Size: 68mm x 68.8mm  
Weight: 121kg

The smaller NSR500 V2 is a lighter bike, designed for better cornering and overall performance rather than high-end power.

**Yamaha YZR500**  
Year: 1992  
Engine: Two-stroke V4 water-cooled, 499.27cc  
Power: 160+bhp  
Bike Size: 54mm x 54.5mm  
Weight: 131kg

The Yamaha YZR500 underwent a complete chassis redesign for the 1998 Grand Prix. It has been designed for superior handling, and has a high level of grip for cornering.

**BMW RGV 500**  
Year: 1987  
Engine: Two-stroke V4 water-cooled, 499.27cc  
Power: 180+bhp  
Bike Size: 54mm x 54.5mm  
Weight: 131kg

The BMW RGV is slightly less powerful than its four cylinder counterparts, but has advantages of better braking, and the ability to run for longer times.

**Yamaha TZ250**  
Year: 1996  
Engine: Two-stroke V2 water-cooled, 250cc (estimated)  
Power: Over 160bhp  
Bike Size: 54mm x 54.5mm  
Weight: 131kg

With an engine developed from sidecar racing, the TZ250 provides a high output engine but is less manoeuvrable as it is slightly over weight.

**Motorrad KTR 250**  
Year: 1997  
Engine: Two-stroke V2 water-cooled, 250cc (estimated)  
Power: 160+bhp  
Bike Size: 54mm x 54.5mm  
Weight: 131kg

The development KTR is the only 3-cylinder bike in the competition. The goal of the KTR is to bridge the gap between V2 and V4 performance characteristics, providing power comparable to a V4 with a 15kg weight advantage.

Computer controlled AI riders are fiercely competitive and will hunt you for all you're worth, especially if there is a podium finish up for grabs. I found it extremely difficult to finish in the top three in simulation mode mostly because of the determina-

tion of the AI opposition, but strangely enough it is not impossible to win. Grand Prix 2 year domination can be held for long periods of play. I was literally sweating with excitement (doesn't say much for my mental let alone my physical stamina) after completing a full lap race and only making sixth. I was actually quite proud of my achievement even though it is quite a disappointment that Microprose have left the champagne ceremony unceremoniously out of the game. This is the kind of enjoyment that GP500 holds in store for you by simply just need to achieve start each stage you start your engine. I have managed to complete a full season but have been

lucky on a few occasions breaking my

an overall seventh place for the season, not bad considering, but it does leave a lot of room for improvement. A thoroughly detailed manual is included explaining every ounce of the game including

## REVIEWS UNDER FIRE

of the AI opposition, but strangely enough it is not impossible to win. Grand Prix 2 year domination can be held for long periods of play. I was literally sweating with excitement (doesn't say much for my mental let alone my physical stamina)

after completing a full lap race and only making sixth. I was actually quite proud of my achievement even though it is quite a disappointment that Microprose have left the champagne ceremony unceremoniously out of the game. This is the kind of enjoyment that GP500 holds in store for you by simply just need to achieve start each stage you start your engine. I have managed to complete a full season but have been

racing techniques such as overtaking by passing yourself throughout the race. It also gives you a lesson on how the rules and systems work in the FIM Championship for those who don't understand the flags and penalties given to riders. I must make mention of the on-screen help icons that appear while racing indicating when breaking and passing manoeuvres can be performed, this can be disabled but is an excellent guide to beginners in the early stages of your racing career. There is also an intuitive save function as well as a wonderful replay mode that is excellent for watching those sweet overtaking manoeuvres and close line finishes that occur regularly in GP500.

I have been extremely impressed with GP500 and can categorically state that there is nothing on the market at the moment to compare against its playability and enjoyment factors. Everybody who has an interest in racing understands that the FIM 2000 is one of the most competitive and closest Championships in the world and GP500 highlights that with its superior realistic control and AI system. Unfortunately this review has to be tainted with a bad ending where and when will GP500 be available on the shelves in South Africa? As it stands right now there is no representative for Microprose in this country but information sent to us does look good for the millennium as far as Microprose is concerned. My only advice to you if you enjoy anything remotely similar to GP500, make a fuss and get a copy. It's the right thing to do.

# REVIEWS UNDER FIRE

The next step involved the same basic steps previously described, but the team developed a more detailed understanding of the system. This included mapping the system's architecture, specifying the system's requirements, and defining the system's interfaces. The team also began to identify potential risks and opportunities.

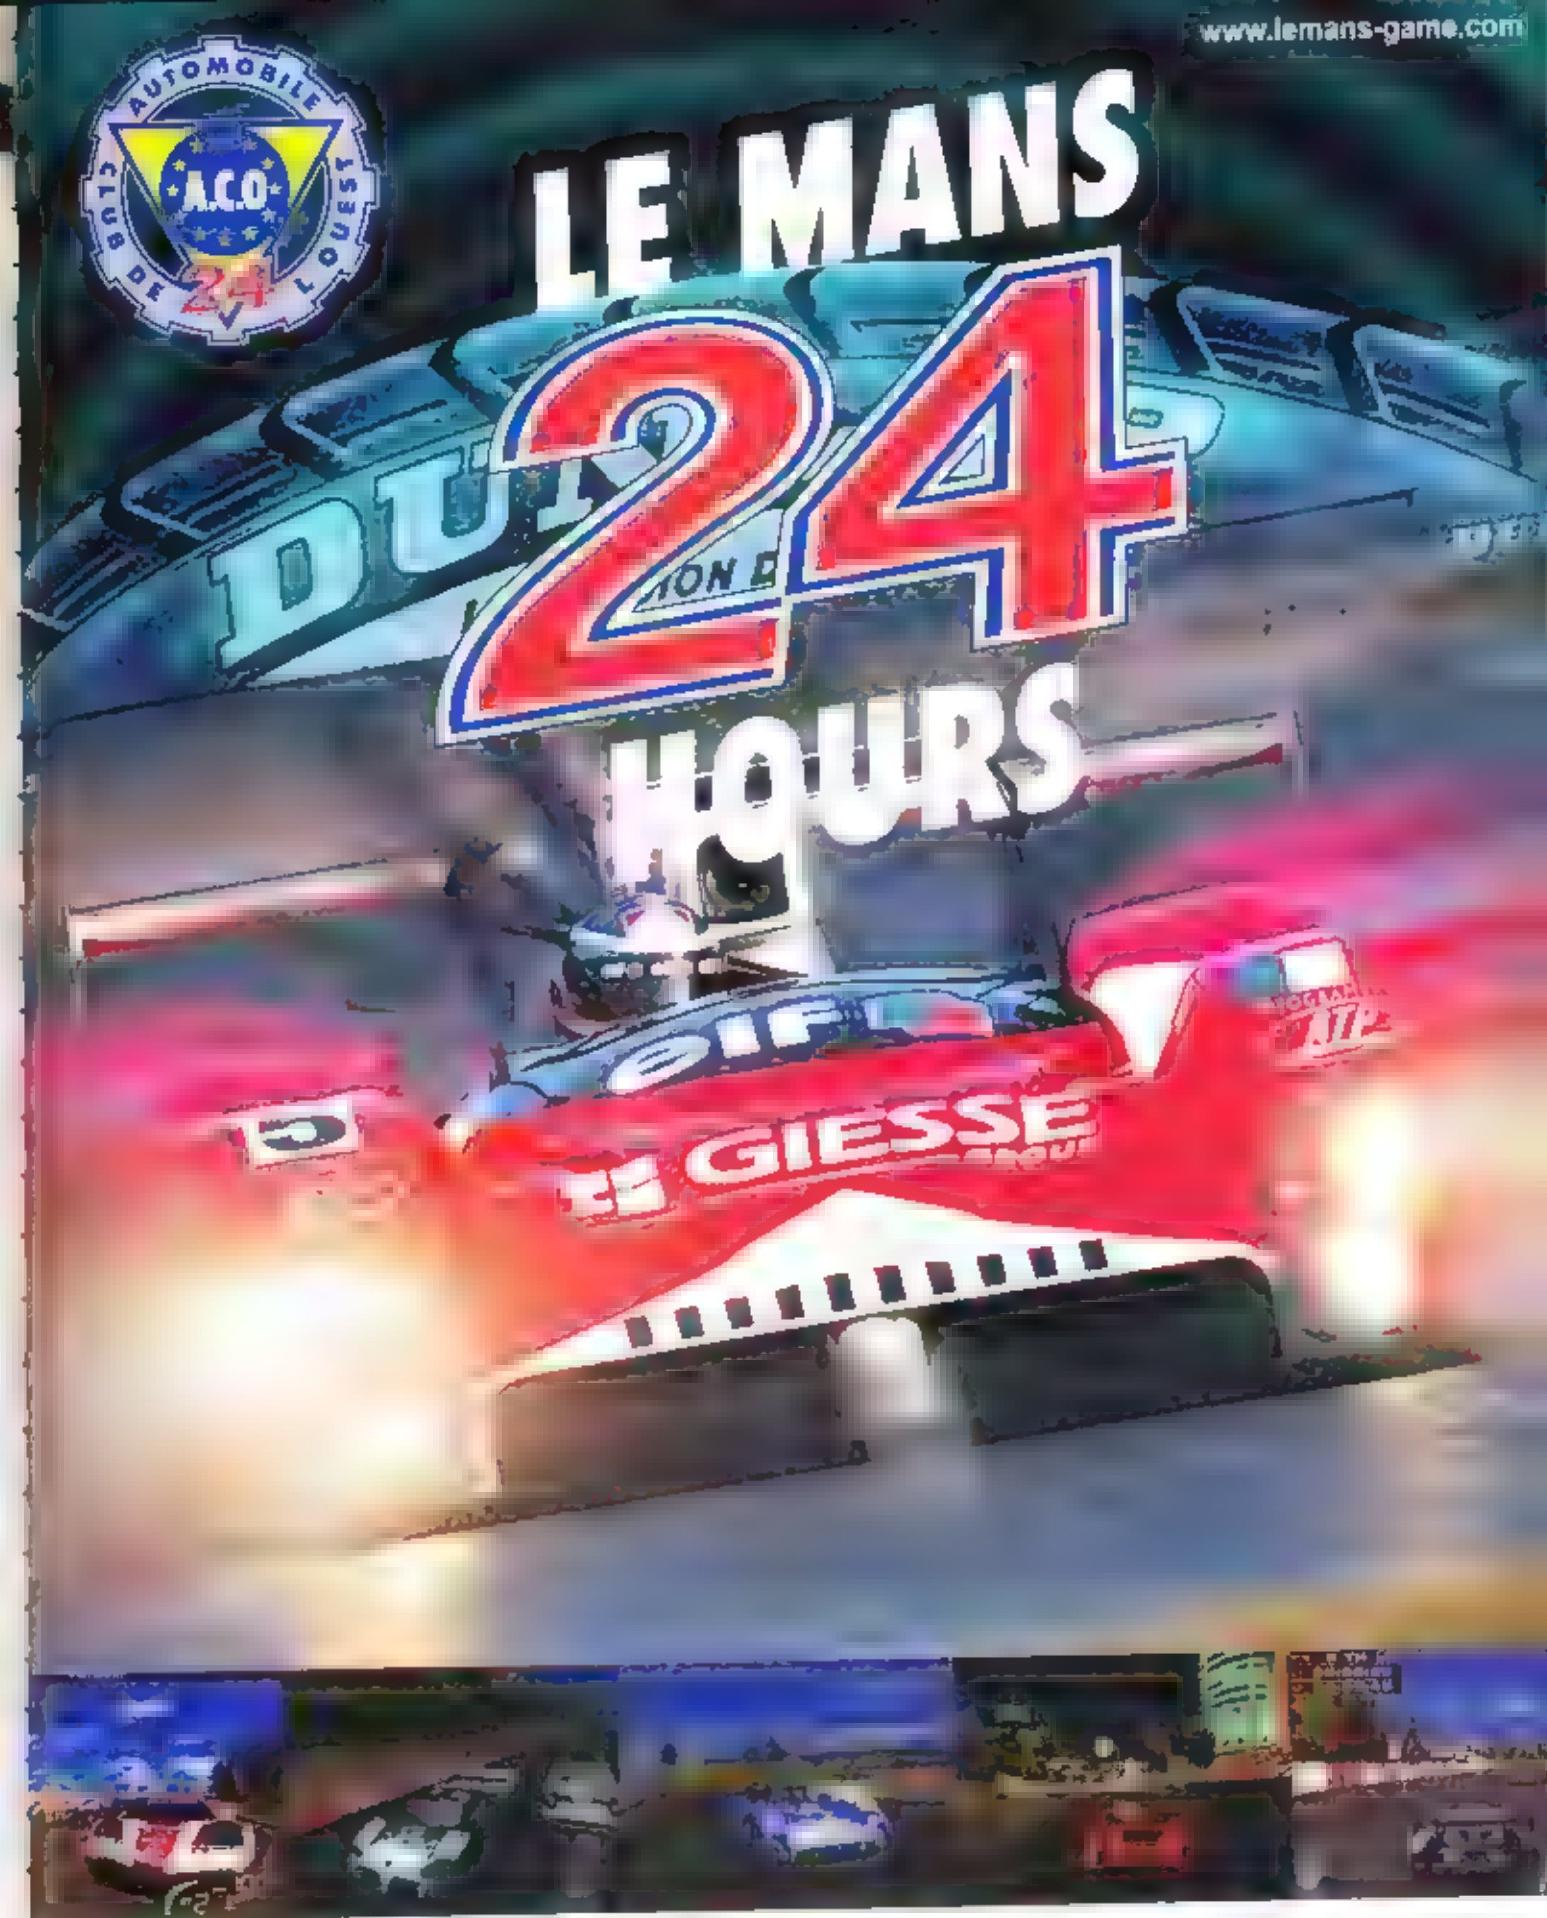

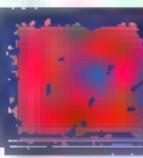

# PEACEMAKER

If the key words exist in the same document, it is likely that they are related to each other. For example, the word "apple" is likely to be related to the word "fruit".

the point at which the signal passes through the system. The second problem is to determine the time constant of the system by means of measuring the time taken for the signal to decay to one-half of its initial value. The third problem is to determine the gain of the system by means of the ratio of the output signal to the input signal. The fourth problem is to determine the phase shift between the input and output signals. The fifth problem is to determine the frequency response of the system by means of a sinusoidal input signal. The sixth problem is to determine the transient response of the system by means of a step input signal. The seventh problem is to determine the steady-state error of the system by means of a sinusoidal input signal. The eighth problem is to determine the stability of the system by means of the Routh-Hurwitz criterion. The ninth problem is to determine the poles and zeros of the system by means of the root locus method. The tenth problem is to determine the frequency response of the system by means of the Nichols chart.

**The Ultimate Racing Experience!**

# REVIEWS UNDER FIRE

In a market already saturated with racing games, it seems pointless to produce yet another product, which simulates the rigors of competitive vehicle driving. There are so many titles, so many variants on the racing theme that it is nigh impossible to come up with a new idea for the market. All that is left is improving on what has come before making games faster, prettier and more realistic. Or so it seems. But every now and then, some bright spark in a dimly lit room says, "Hang on, wait a minute I think I've got a truly original idea..."

**S**eed Storm is possibly one of the most original racing concepts I have seen for quite some time. This was not my initial thought. I agree. When the Ed handed this one to me, I didn't quite know whether to laugh or to cry, am not a great admirer by

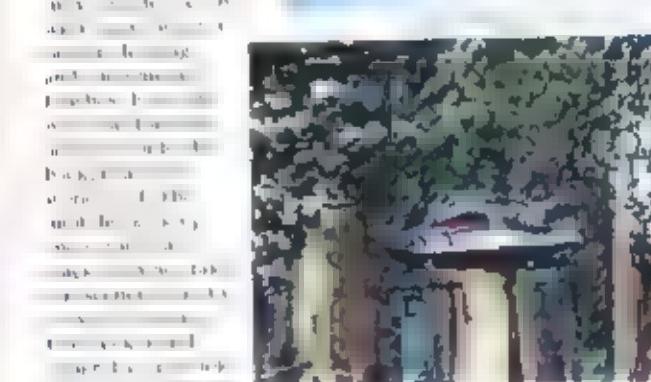

# SLED STORM

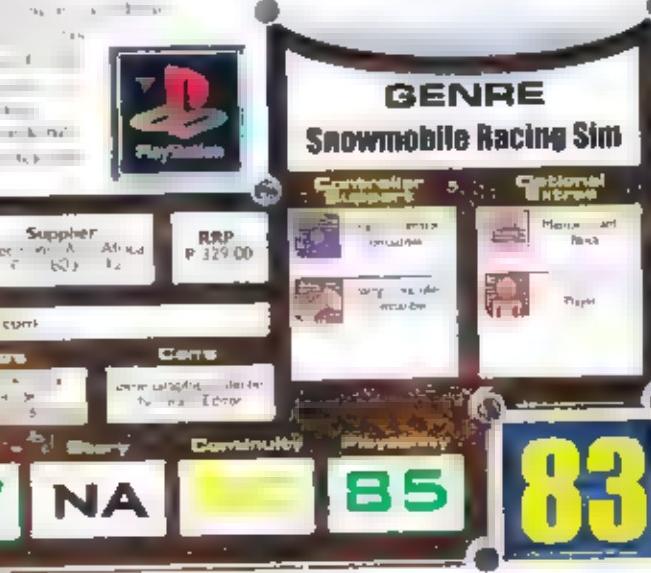

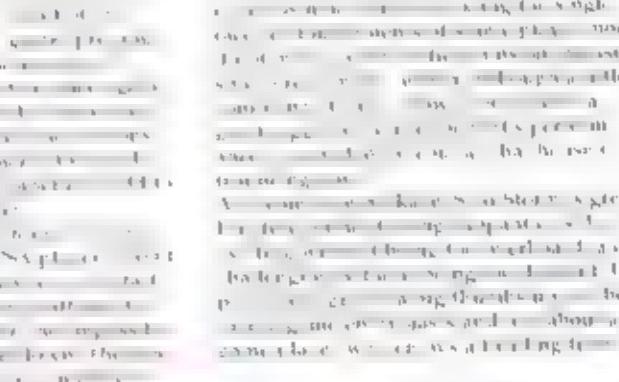

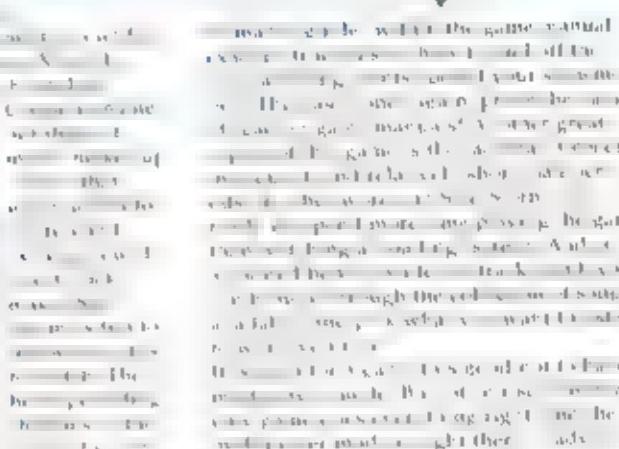

You will have to master the art. These are not big aerial stunts performed in tandem by the snowmobiles and it's the act are rather a series that the rider performs while flying negotiates the track. Tricks are made from the rear view mirror. You can see the track ahead of you. One under  $\frac{1}{2}$  mile at New River State de No Handler Admits a single trick has a value of 100 points. You need to perform a trick and earn blocks to upgrade your score with the 100 points. The trick becomes more difficult as you go along. performing a trick more than once reduces the amount you earn for it. E.g. if you manage to do a trick with a single block, the next time you do it with a double block. A lot of after a bit the speed is lost merely doing the correct key strokes to execute a trick are enough. If you don't make a successful landing after the trick you get a fine money that you can use to buy new parts.

8160 STORM

### **NETZWERK DER FREI**

# REVIEWS UNDER FIRE

The fighting genre on the whole can easily be described as a sad and shallow pool of stagnating entertainment. So it's not often that a fighting game comes along and dares to try and do something different. Destrega is such a game, but sadly during the transition from concept to game something important has been left out.

Perhaps the whole of the old school fighting genre is to blame for the lack of innovation. Too many titles have followed the same formula of button mashing and a few attacks. It's time for something new.

## DESTREGA

### MAGICAL REVENGE

Destrega is a fighting game that is set in a futuristic world where magic and technology coexist. The game features a variety of characters with unique abilities and weapons. The story follows a group of rebels who are fighting against a powerful organization that has taken over the world. The game is filled with action and excitement, with many different levels and challenges to overcome.

Red Tide

Fighters like these. What's good about them is that they're not afraid to mix things up. And that's what makes them stand out. What's impressive is how much variety there is. And that's what makes them stand out. The game is filled with many different characters, each with their own unique fighting style. The story is also quite interesting, with lots of twists and turns. Overall, Destrega is a great fighting game that offers a lot of fun and excitement. It's definitely worth checking out.

## MISSION: IMPOSSIBLE EXPECT THE UNEXPECTED

Good service, Mr. Phelps.

Prepare to edge the real Mission: Impossible now. Your mission, should you decide to accept it, will be to guide your team through 3 mission-critical missions, encompassing over 30 levels of pure play. As always, should you be any member of your MI team to meet its fate, the Secretary will dismiss any knowledge of your mission.

Real missions will be real tough in the sequel, but you may... And that's all.

# REVIEWS UNDER FIRE

It has been quite some time since the PSX has had a tennis title to rave about and ever then they were quite average releases. Now after battling with the ball machine for a year and a bit Ubisoft have finally managed to bring a serious tennis simulation to the PlayStation. Serious is a strong word so I'll have to rephrase that last statement slightly, they have created a true to physics representation of the game of tennis - good enough for me.

Storm

**OVERVIEW** Coming back again, we're going to have to say that All Star Tennis is a very solid title. It's not perfect, but it's a solid title.

## All Star Tennis '99

After the success of the original All Star Tennis, Ubisoft has decided to bring the title to the PlayStation. The new version is a solid improvement over the original. The graphics are much better, the controls are more intuitive, and the game play is more challenging.

The game features a variety of modes, including career mode, tournament mode, and practice mode. The career mode is the best mode of play, as it allows you to compete against other players from around the world. The tournament mode is also quite fun, as it allows you to compete against other players in a variety of tournaments.

The game is well balanced, with both offense and defense being equally important. The graphics are also quite good, with realistic ball physics and accurate player models.

The game is a great addition to the PlayStation library, and it's definitely worth picking up if you're a tennis fan.

We're happy to say that All Star Tennis '99 is a solid title. It's not perfect, but it's a solid title. The game is well balanced, with both offense and defense being equally important. The graphics are also quite good, with realistic ball physics and accurate player models.

# REVIEWS UNDER FIRE

These days, referring to a game as an adventure game is almost a cop out. Let's be honest - virtually every game out there is an adventure whether it be a 3D format, or a platform game. They take us to a myriad of new places, and flood us with tons of new ideas. However, some games are still highly deserved of the adventure game moniker. These are the games that, in my own humble opinion, not only take the player through the various stages of the prescribed adventure, but also take him beyond - in new concepts, new ideas and new thought patterns. They surpass being just plain old adventures on screen, and become whole new adventures for the mind. Shadow Man is such a game.

It is not awfully often that a game can be called truly impressive in a most every sense. However, Shadow Man certainly deserves this distinction. He saves the world as Mike, a down on his luck, ex-student whose action direct

is not dark power. Only the Shadow Man is the only being capable of containing these Dark Souls' souls. It is powerful enough to stop the darkness.

Often, when a game is presented on both PC and PSX platforms, a new rendition of the game will always be available for the

platforms.

platforms. Shadow Man is starkly different here. It is a true, true spiritual adventure. As the Shadow Man, the player must travel through an underground city, taking possession of dark souls power. The player must travel with huge amounts of raw power. With the power, he can twist and transform the big ones he already known. The Ripper Legion has already given for these evil powers within. Leadside, and plans to

ELECTRONIC ARTS  
Africa  
[www.ea.co.za](http://www.ea.co.za)

# Bargain Buys

Electronic Arts Africa has just released the second edition of this compilation set, *The Biggest Names, The Best Games, The Best Games 2*. The title weighs in at R 299.00 and is distributed by Electronic Arts Africa on 011 903-1212.

Take up the reigns as Detective John McLane the wise cracking LA cop portrayed by Bruce Willis in the highly successful *Die Hard* movie series. This action packed game allows you to relive any of the three scenarios presented in the movie - take on terrorists in the Nakamura Hotel lobby through to scenes in New York's Central Park and the roof of a subway station. This is a thrilling, action packed game, filled with guns, weapons, explosions and humour. You may select any of the three missions to start with - the missions do not have to be completed in any particular order. Within these missions you will find a number of different game styles.

Third person view, first person view, etc. It's a real bullet hell all the variants of the modes is a need for quick reflexes and quicker thinking! This is a sure winner for those out there who love fast paced action, role with snappy comments and quips à la John McLane.

**Tiger Woods 99** is one of the best golf simulations on the market.

Take one of the best golf courses in the world as Tiger Woods (or any of several of the world's top golfers) and play your way to the top! Tiger Woods 99 features some of the most impressive graphics available in golf games, as well as brilliant sound, featuring a play by play commentary, club selection, play style, everything is up to the player. It is up to you to guide the golfer of your choice to victory! Tiger Woods 99 will definitely provide the player with absolute hours of fun and entertainment, and

will simulate the feeling of being on a golf course so realisticly, you will be able to hear the birds, feel the breeze and smell the freshly mown grass under your feet.

## CD-ROM

After the world based on Michael Crichton's novel *Jurassic Park* in *Trespasser*, an add-on to the blockbuster sequel to *Jurassic Park*, *The Lost World*. An

John Hammond's Dinosaur production island. Of course, the original actor, Sir Richard Attenborough, performs the voice of John Hammond. This small island in the Clave Mareas island group is, of course, populated by dinosaurs created by Hammond's company. Well, let the games begin. As the trespasser you enter his DS Adventure in a bid to escape the island and, more importantly, survive. This game is set in on the long, often treacherous trip into the world created by author Michael Crichton, who is also responsible for books like *A Jurassic Park* and *Dinosaur*. *Trespasser* will chill you to the bone as you fight for your life against ruthless creatures from another age. Beware, for every step counts in this one! And the dinosaurs don't die too easily either. This is a game where discretion is often the better

choice in this impressive boxed set.

## CD-ROM

Fast, faster, fastest! Electronic Arts' ever popular Need for Speed series enters the realm of cops and crook in this fast paced driving simulator. Get behind the wheel of some of the fastest cars known to man - and a few unknown models.

to desert canyons to modern cities. But beware for the police are out there!

A new feature in this game is the fact that doing acts of the law is out to put you in prison for your bad driving habits. On the other hand should you wish to represent the authority then challenge yourself by getting into a police pursuit car and chasing down, ambushing and generally busting offenders. A fully multi-player mode guarantees the long life expectancy of this title, with several play modes and almost infinite variations making this one of the most fun multi-player games ever. Add to that full Internet support, with new cars, tracks, patches and add-ons being created constantly and you have a truly versatile fun and fan game that will keep you busy for years!

This is the future, but not any kind of future that we could want. Crime rules the streets, and the cops of the LAPD are not exactly having a good time. However, the introduction of robotic armoured assault units, armed with state-of-the-art, powerful weaponry, is making their lives a

bit easier and problem isn't going to be just a one more than one small iota? Can these odd boys and

take the criminals down in a way that they

know they've done something wrong? This beautifully presented isometric game features a camera that automatically pans for the best view of the action, getting you right into the action for every machine gun blasting, rocket launching, bomb detonating second of gameplay. The wonderful graphics work hand in hand with a mind numbing sound effects package creating a truly enthralling piece of PC game ware. No job is too big or too small for these cops as they tackle terrorists throughout LA on a wide variety of missions with varying objectives.

But be warned: just because you ride around in several tons of armoured vehicle doesn't mean that you are invincible - should you not be careful, you will most certainly be blown into micro-particles by enemies that are smart, cunning and very, very bad.

I start off I just want to explain the terminology this card cannot open arrival here at New Age Computing. Never in my life did I have to fight so hard to get my hands on a review sample. As soon as it showed up the whole staff was at the door harassing our Marketing Manager for the box, and of course they only won one. Luckily the editor calmed things down and gave me the card for review with a few understanding that it comes back to him afterwards. He needs to give a second opinion! You might think I'll probably never see the card again. Just thought I would get my update for the review on with the review!

For the first time a Creative Labs product arrived in a box that is black and doesn't use the usual Creative. Definitely a box to attract your attention. Inside you will find the 3D Blaster GeForce card, a manual, driver and utility CD, a Win DVD CD, as well as a special edition of Eudora 6.0. As with most products today installation is easy and there is a chapter

in the manual that explains how to install the card. The manual is very good and easy to follow. It also includes some basic information about the card and what it can do. All the important information is included in the manual, including the drivers and utilities. The manual is well written and easy to understand.

**Complex Benchmark = 11.8 FPS**  
**Bimplex Benchmark = 48.7 FPS**

In the standard driver installation should you like that time. Simply plug it into your AGP slot, screw the card firmly in place and you're done with the hardware installation, of course you do still have to connect the monitor. Upon bootup of Windows you

they would have to have been specifically coded to do. Developers have announced their support for hardware T&L, and you can bet that we will see games making use of it soon. Interestingly enough John Conkright from Id Software has stated that

### 3D Mark Pro Benchmark

Resolution	3D Mark Score	FPS (Racer)	FPS (Shooter)
640x480	4102	31.7	30.1
800x600	8	6.0	5.0
1024x768	5	4.0	3.0
1280x960	10	3.0	2.0

The total score is 4102, which is quite good for a budget card.

has arrived... The latest 3D accelerator from Creative Labs has hit our shores and sports the new GeForce processor from nVidia. The card promised to be the next step in 3D gaming and also the fastest on the market, but does it deliver the goods? Find out in our in-depth look at the 3D Blaster GeForce from Creative.

You will be prompted for the drivers and CoForce is ready for some real action. The 3D Blaster GeForce has 32 MB of RAM, nVidia GeForce 256 chip and has support for AGP 2X and AGP 4X. The GeForce 256 chip will

support optimisation by video T&L, on the GeForce based cards. As can be seen from the benchmarks we did the scores aren't anything to rave over when considering the 3D Mark score and pretty much compare with the rest of the top end cards on the market. This is due to the fact that no card or benchmark supports T&L yet. On the other hand if you have a look at the Treasures score you see true reflection of the cards capabilities. The GeForce also supports spherical environment mapping for more realistic reflections within games. Until now,

# GeForce

nVidia's new QuadPipeline technology, enabling the card to render four 32-bit pixels per clock cycle. This is twice as much as the TNT 2 chip set. The card is also able to render 18 million polygons per second, and all this just to play games. With twice as many tessellations as the current Pentium III processor the GeForce is no longer just a 3D accelerator but should be thought of as a Graphics Processing Unit (GPU). If that isn't enough it also has support for DVD playback and features an ATI rendering engine so you can watch DVD titles in a Windows or Mac screen without any quality loss.

The GeForce 256 chip has been getting a lot of attention in the press lately since it is the first 3D accelerator to support Transformation and Lighting engine on the chip. Potentially what this does is free up processing power on your CPU, whilst until now has been doing all the T&L calculations, for more important gameplay features such as Improved AI (Artificial Intelligence). Unfortunately this feature was only added in DirectX 7 and we will have to wait for the first games to make use of the new API to see the true power of the GeForce. For games to take advantage of this feature

they would have to have been specifically coded to do. Developers have announced their support for hardware T&L, and you can bet that we will see games making use of it soon. Interestingly enough John Conkright from Id Software has stated that

Transformation and lighting engine spherical environment mapping has currently no games that make use of Transformation and Lighting hardware available.

**Pro's:** Transformation and lighting engine, spherical environment mapping, DVD playback support  
**Con's:** Currently no games that make use of Transformation and Lighting hardware available

The new Wingman Extreme joystick is the latest in the eight-year-long series for the flight simulation market and is the flagship model for the set.

Logitech's Changes from the previous Wingman Extreme have been a combination of the attitude handle, which is now more comfortable, the joystick button cluster, a new modern design, and up to four in a sturdy fixed base.

At this point in the review I am not sure what the best and ergonomics of using the joystick in the process of the Wingman Extreme.

The joystick is designed for the market.

It is different from the

standard joystick.

It is the advantage of the

twist handle, which

# Mercadian Masques pre-release attracts hundreds of players

and I am looking forward to another opportunity where we can all follow. Kite flying was probably a real thrill - it's huge fun planes. Different ones seem good at different things. I think the most successful designs seem to be the ones that have a lot of surface area and are very light. The sounds were like big, sustained whistles or wails that were really pleasant to listen to. The Turners and the Sigmund Rethel and W. K. are up again this month, and I expect some great kite flying. I am also looking forward to the Farnell's coming back. Mark is still in town, so there are a number of events I am looking forward to. I am also looking forward to the 100th Anniversary of the 1st BSA Troop in the Fall, which will be held in the same park, just across the street from the campgrounds now. It's an old boy scout troop, and they have been around since 1912! BSA says their evidence of activity goes back to 1906. Remington Park - No. 100 is where I grew up as a child. It's a park in the northern part of town, and it's bounded on one side by a large lake, and on the other side by a large hill. The hill has a lot of trees and shrubs, and there are a number of paths that lead through them. There is also a small stream that flows through the hillside. The park is a great place to go for a walk, or to have a picnic, or to just sit and relax. It's a great place to be.

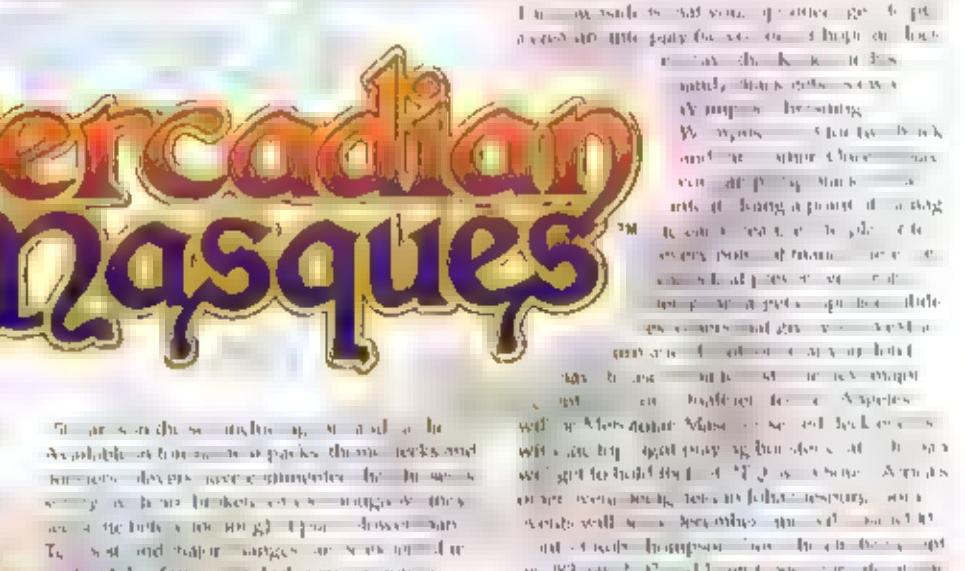

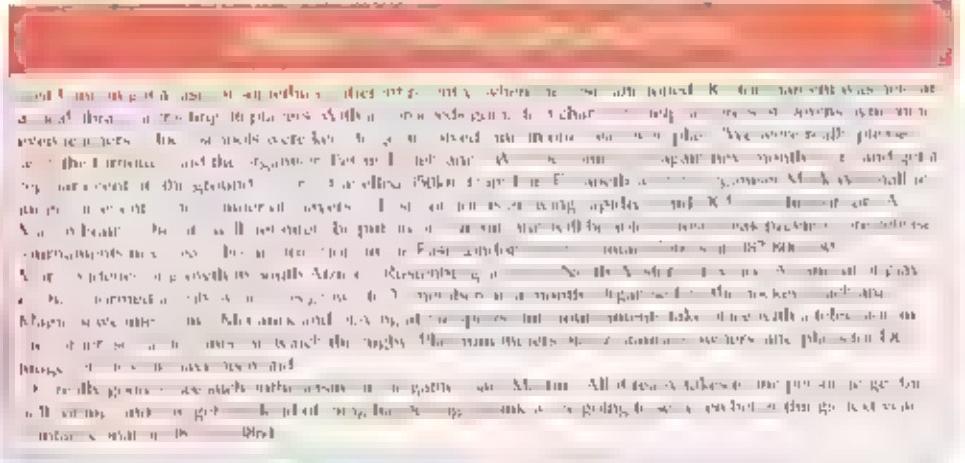

Finally, you can make the transition to a healthy diet. Most of the time, it's easier to make the transition to a healthy diet if you start with small changes. For example, if you eat a lot of processed foods, try replacing them with whole grains, fruits, and vegetables.

**S**o, as you can see, we've got some great things going on here. I think the Kicks are probably the best show in town right now. They're a great band. And the other shows have been really good. I think it's a mix of doing a point of view. It can be about the people or the country itself, or it can be about the place where the country is at, or it can be about the people and the place they're in. And I think that's what makes it so interesting.

nearest way to get into Magic: The Gathering is the new Starter Kit box, complete with a copy of instructional video, two starter decks, a 52-card card, play mat, play guide and book. These will be on sale before Christmas at CNA Interactive outlets around the country at around R 30. CNA Interactive is also aiming at the possibility of stocking the full range of product, making it easier than ever to snap up boosters when you need them.

[Get into the Arena](#)

Ainslie's post has been featured in British *Alleywaying* in two outlets. Given the success of the tournament, it is now available just outside Johannesburg, at the *Alleyway* in Pretoria. The new system is more or less identical to the previous one, and I think more shops will adopt it. I am interested to see if any shop could do it." The shop's organiser decided what about Alleyways would be shared, as far as possible, players who had given me a sheet to keep back their results. The shop also keeps a log of players' names, how long they've been playing, and so on. At the moment, there are 100 names on the sheet, including five weeks. You can play any other player in the league, and never have won enough money to get into the top 100, and still be part of the league. You can play for a loss, or we permit you to win, but at a greater rate. The 100 points needed to get into the top 100 are gained through the play that he has it won or lost. If a player is sent to the organiser's account by players at the end of each session, the shop's results as set out in the formular. A maximum of new shops will open in South Africa before the end of the year. Every week it is our location in most arenas, and most tournaments.

# URBAN CHAOS

# MULTIPLAYER MAYHEM

One of the biggest gripes from the South African gaming consumer is the price of software and hardware in this country. The fact that piracy stems from the price of games is only an excuse for us to pirate the products. We assume that our distribution companies in South Africa are making tons of money off us to line their own pockets - is this so? I managed to corner one of the product managers of Multimedia Warehouse for our region and interrogate him for a few hours and this is what I came up with:

The second argument is that the  
protection of the Canadian industry is  
not justified by a significant increase in  
the cost of production. The other argument  
is that there is no real threat to the  
industry. These are the two main points  
of the case for the protection of the  
Canadian industry. The first point is  
based on the argument that the Canadian  
industry is at a disadvantage compared  
to foreign producers. The second point  
is based on the argument that the Canadian  
industry is not threatened by foreign  
competition.

The Gamers Side

## The Early Years

the whole range from the gas in the air to the water in the sea, from the heat of the sun to the cold of the stars, from the strength of the wind to the force of the lightning, from the power of the ocean to the energy of the atom.

## Current Day

Seulement, il est nécessaire de faire une autre chose : il faut que les deux partenaires soient également motivés et engagés dans la recherche d'un résultat commun. C'est pourquoi il est important de faire évoluer l'ensemble des acteurs de la recherche et de l'innovation vers une culture de l'engagement et de la responsabilité. Cela passe par la mise en place de structures de collaboration plus étendues et plus durables, qui favorisent la participation active de tous les acteurs et leur responsabilité collective pour le succès du projet.

# PRICE V

tered always at the same time. It usually takes  
one or two years to build up a new crop, so that  
all the grain must be stored until it is ready  
and then sent to the market. The usual  
method of storing grain is to put it in large  
bins which are built up in the open air.  
These bins are built so that the grain is kept  
dry and cool, and they are often made of  
brick or stone. In some cases, however,  
the grain is stored in large bags or sacks,  
which are then put into bins or stored in  
the open air. This method of storing grain  
is not as good as the other, because it  
is more difficult to keep the grain dry  
and cool, and it is also more expensive.

and problems will remain unanswered. A formalized approach to the problem of identifying and understanding the social context of the individual's life is needed. This paper presents one such approach, based on the concept of the social situation. The social situation is defined as the set of social relationships in which the individual is involved. The social situation is a dynamic entity, changing over time as the individual's social relationships change. The social situation is also a complex entity, involving many different types of relationships, such as family, friends, work, and leisure. The social situation is a key factor in determining the individual's behavior and well-being.

It was during my first year that I  
was taught how to make a simple  
affectionate gesture which I call  
the "handshake". It was taught to me by  
a teacher who had been trained to help  
people learn to love each other more  
easily.

What do we need to start doing this season? I think a factor of three improvement will be fine. I think it's important to have a good mix of short programs. Double is definitely appropriate if you are looking at a race that is relatively flat. What's the right balance of flat to hilly and how many

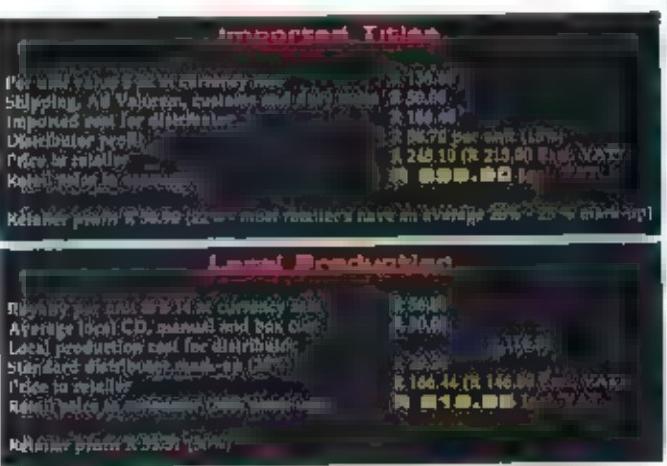

It is not given out  
that you are  
the man who  
has been  
killed, but  
I am told that  
you are  
the man who  
has been  
killed.

## What is profit?

based on a comment left on the article in *Science* by George and Anne Merriam of Albany, New York, who reported that they had found a *Leptothrix* sp. in their *Thomomys* specimens. The author has been unable to find any published reference to this work.

E del note

But you're making money that it's the overseas distributor of the game in this scenario. It's up to you to find distribution. There are a few companies here to help you do the top half of it - for some reason and have got an A-list of movies such as *Aliens* and *Aliens*'s *Predator* at R.R. Donnelly and Sons, getting a wrap over records, other local lists, etc., and in order to enough sales at enough local stores both, why then will we see prime stops. You probably wondering what the price of games has to do with *Multiplayer Mayhem*? Well, it's such a controversial topic that the Ed decided you simply had to know. We'll be back to normal next month - this article will self-destruct in 5-seconds, 4, 3, 2... .

There are down the Kestrel and the Gull advertising and showing displays in the B&B motor which are absorbed from a 2% rebate from the permanent B&B motor but if you do the figures it doesn't even cover the cost of a 2% of sales. If any grants are to made then a % of the B&B units need to be sold this year only in B&B.

# The Demo Scene

nick. Think of the most talented people you know in programming, art or music.

Chances are they are specialists in one - or perhaps two - disciplines. Most coders can't draw for toffee and plenty of musicians think coding a music player from scratch is trivial - until a coder shows them the 1000 lines of code that just mixes the music together 30 times per second.

Artists of course live in a special world by themselves, untouched by reality or the ability to communicate effectively with non-artists. But you're going to need them on your team - they are a rare resource.

The point I'm getting to is that you'll have to co-

MAVER.ON.HIS.CO.ZA

To achieve that means working together with other members who have different skills. This becomes even more important when (or if) you decide that you want to do a game. Some evidence to back this up comes from the Open Source movement. (To broadly define it quickly would be impossible, but I mean those groups of volunteers who write free software - such as Linux, BSD, Apache, GNOME, KDE and all the tools that go with them). Despite Open Source's proven stability and superior methodology, over 80% of all projects started as Open Source fail or never get past the beta stage.

The reasons are worth looking at because they give some insight into why you and your team might not finish a demo, or even get it to the point where you're reasonably happy. Chucking everything together the night before doesn't work too well, I know. I've tried it.

Free software is written by volunteers. So are demos. Voluntary projects suffer from a number of unusual problems, the first being they are done by volunteers. When people give spare time, they don't expect to be rewarded. So when someone doesn't do something on time or loses interest, all you can do is grin and bear it. Volunteers also tend to be highly

individual. So are demo scenes. When it comes to art and music, this can be a bonus. In the programming world, it can lead to disaster. One coder may prefer one language, another may despise it. One person's coding style will be completely different to another's - yet they might have to collaborate on the same troublesome piece of the project. Of course that's the fun of working together with different people - new ideas and different views can often help you solve problems by seeing things differently.

But that won't help you up deadline. What will help is a number of guidelines laid down from the start of a project. None of these are my idea; in fact most of them are shamelessly pinched

from a guide to writing free software (exactly which guide it is I can't remember but there are plenty on the Net to choose from).

1. Decide on a timetable. This doesn't have to be carved in stone - just as long as everyone knows what has to be finished and by when. Commercial game teams know the value of a well-laid-out timetable - even only if they can see how far over deadline they are.

2. Decide on standards BEFORE you start. This includes how your project will fit together, which languages will be used, which libraries you're going to use and what tools will be needed. Chucking everything together the night before doesn't work too well, I know. I've tried it.

3. Make sure everyone in the team knows what they are expected to achieve. If you can at least agree on some of these guidelines before you try and attempt a super-whizzbang game or demo, then you'll have a head start.

By the time you read this Optimise will have come and gone. I look forward to seeing who knew all this already!

When you get to Kain, you'll be in a room that is circular and has different levels. You need to stay bottom in the center. There is a thing here that causes all your health back to normal and keeps it there. When Kain shoots you with his energy ball, stay on it until you have full health again. Then look around until you see a big blue energy ball and run toward it. Kain is making the energy ball. Quickly race him with your Soul Reaver. Keep this until you have killed him. During the end of the battle he will go to the very top of the room where you can't see his energy ball. At this point just run to where you think he is. It may take a few tries, but you can beat him without

activating those codes. Pause the game, press and hold L1 and R1 when the game is resumed the character will

press C right, Up, Left, Up, L

Right, Right, Left, Right, L

Point Blank 2

In the Point Blank Castle Mode you will see two little men rid no horses up towards the top of the tower. You may shoot them for

100 points each. This is just because they're there.

Shadow Man

Pause the game and then hold L1 or R1. Now on at Up, Up, Down, Right, Right, Left, C right, Right, Left

Please and Hold R2 + L2 while play

At the same time you will have to hold L1 and R1. When the game is resumed the character will

press C right, Up, Left, Up, L

Right, Right, Left, Right, L

G-Police 2: Weapons of Justice

When you are in the game, when the action appears hold L1 to fire. You should hear a noise.

Point Blank 2

PREPARE YOURSELF  
FOR THE THIRD.

## QUAKE III ARENA

GET READY TO REARRANGE YOUR LIFE.

QUIT YOUR JOB. SELL ALL NON-COMPUTER-RELATED POSSESSIONS. SAY GOODBYE TO YOUR LOVED ONES AND GIVE AWAY YOUR PETS. QUAKE III ARENA™ IS COMING, AND THOSE CAUGHT UNPREPARED WILL FEEL THE ERROR OF THEIR WAYS. QUAKE FEATURES AN ENTIRELY NEW SINGLE-PLAYER EXPERIENCE. AND WHEN YOU'RE READY TO REACH OUT AND TOUCH SOMEONE, THE ARENA WILL SEPARATE THE WARRIOR FROM THE GREASE SPOTS. IT FEATURES NEW PLAYER CLASSES AND THE FASTEST ENGINE YET. SO RELYING ON YOUR OLD TRICKS WILL GET YOU FRAGGED. QUAKE'S ORGANIC, INTENSELY REALISTIC GRAPHICS WILL MAKE YOU LOOK GREAT AS A SHOWER OF GIBS IF YOU ENTER UNPREPARED. WELCOME TO YOUR NEW LIFE.

### THE BEST KILLS ARE NOT ALWAYS ONLINE

The excitement of the Deathmatch is no longer the exclusive realm of the online gamers. Thanks to QUAKE's revolutionary artificial intelligence, the days of predictable bots are just a memory. The game's characters react like experienced gamers, and when you get gibbed, you may swear your computer is enjoying itself. Single players will find that level by level, QUAKE delivers the intensity of a live Deathmatch. Forgetting your enemy is every bit as exciting. Getting trashed is every bit as humiliating. You may just think twice about mousing your back on your computer.

# Send Off

Firstly I would like to congratulate our Editor-in-Chief, Warren Steven and his wife, Tracy on their healthy new baby daughter Kiara (picture enclosed). She was born on the 18th of October at 14:00 PM, right in the middle of our make-up week I might add. She definitely has the timing of her father, lets just hope as she gets older she doesn't have his accurate aim in Quake Arena, otherwise I might have to give up the game for good. On the other hand if she takes after her mother Microsoft will have to develop a few new variations of Solitaire to keep the game challenging. Once again, congratulations to her distraught and very tired new parents.

As for the games that came in for this month I can just say that the distributors have no idea about timing. Up until two weeks before we had to go to print we were worried about not receiving any new titles for review, and then the tide of games hit us. Age of Empires II arrived days before print and we had to lock poor R.A.V.E.N. away in a room so he could finish it and get the review out on time. He came out afterwards - passed the copy to the Editor and promptly passed out, of course all it took to get him

awake again was a strategy game running in the background. Eidos Interactive has also made their re-appearance into the South African market after they were absent for a short period of time. Crew now officially distributes their games so everyone can look forward to all their exciting new titles such as Omnitron: Nomad Soul, Revenant, Tomb Raider: The Last Revelation and so on being available here. I have also heard word that Microprose and Hasbro will be back in South Africa at the beginning of next year, hopefully in time for Grand Prix 3. Things are definitely looking up in the gaming market as we approach the festive season.

As for what games are coming for our December/January issue, I will pass you on to our Editor who seems to be having a slight problem with his predictions lately. What did he say earlier this year? It's easy, all you do is look at the local release list and put in the names of the biggest

titles coming for the month, yeah right! The popular developer saying "It will be ready when it's done" still holds true and release dates change on a daily basis.

We need to come clean... We don't have a clue what's coming next month, sorry!

**RESIDENT EVIL 3  
NEMESIS**

Boo! Scared? You should be, it has been a little while since we saw Resident Evil 2 and it's still difficult to forget just how scary that game was... Even now as these letters and words are appearing in your mind, somewhere, a zombie is eating someone. This next game promises to deliver a survival horror adventure of epic proportions. Should be here any day now... and we can't wait.

**BATTLEZONE**

Some people hated it and others loved it. The first game in this series was a definitive genre buster that had many people enthralled with its unique blend of strategy and first person combat. The second game looks even better and the developers are hoping that the sequel will make its mark on the mainstream market. We'll check it out for you next issue and tell you what we think, if it arrives, ever...

**DIABLO 2**

Into the dungeon we go, again, for the second time, been there, died many times, ran away, you know... that dungeon, remember? Well Diablo 2 will be arriving soon and we've already had nine vicious fistfights in the office (mostly just pushing and name calling really) over who will be reviewing this monster title. So, to find out who pushes the hardest and knows the dirtiest names read our December issue.

**THE X-FILES**

The PlayStation isn't really the first place you'd go looking for an adventure game inspired by the cult television series, the X-Files now is it? Well your search is over (if you were looking that is). This spooky, often confusing and utterly engrossing series will be beaming down onto a PlayStation disc soon. The only mystery that remains is... will it ship on time?

**SWAT 3**

This unique new title is promising to mould a new genre as players are sent on challenging missions of increasing difficulty to swat flies. As you progress through the game you'll be faced with new environments to play in including a greasy downtown restaurant and a local municipal dump, with huge car-sized flies. Players will even get to pilot a giant flyswatter. [What rubbish, who writes this stuff anyway? - Ed]
